GRAPHING PERIODIC TRENDS

The Periodic Table is arranged according to the Periodic Law. The Periodic Law states that when elements are arranged in order of increasing atomic number, their physical and chemical properties show a periodic pattern.

Define the following terms(starting on page 170):

Atomic radius-

First ionization energy-

Electronegativity-

Graph 1 – Atomic Radius as a function of Atomic Number

- A. Create a graph of the atomic radius as a function of atomic number. Plot atomic number on the X axis and atomic radius on the Y axis. Remember to label the axes!
- B. Use a colored pen, pencil or highlighter to **trace** over the element's period (horizontal row on the periodic table). For example: use GREEN to **trace** for all of the elements in row 1, then use YELLOW to **trace** for all of the elements in row 2, then use ORANGE to **trace** for all the elements in row 3, then use BLUE to **trace** for all the elements in row 4.

Energy Materials Discovery Geoffrey A Ozin,Joel Y Y Loh,2022-06-13 Materials have the potential to be the centrepiece for the transition to viable renewable energy technologies if they realise a specific suite of properties and achieve a desired set of performance metrics The envisioned transition involves the discovery of materials that enable generation conversion storage transmission and utilization of renewable energy This book presents through the eye of materials chemistry an umbrella view of the myriad of classes of materials that make renewable energy technologies work They are poised to facilitate the transition of non renewable and unsustainable energy systems of the past into renewable and sustainable energy systems of the future It is a story that often begins in chemistry laboratories with the discovery of new energy materials Yet to displace materials in existing energy technologies with new ones depends not only on the ability to design and engineer a superior set of performance metrics for the material and the technology but also the requirement to meet a demanding collection of economic regulatory social policy environmental and sustainability criteria Disruption in the traditional way of discovering materials is coming with the emergence of artificial intelligence machine learning and robotic automation designed to accelerate the well established discovery process massive libraries of materials can be evaluated and the possibilities are
