Dissection of the Rat

Introduction

You will be looking at the anatomy of the white rat. Believe it or not, the white rat is similar in composition to a human. It has the same circulatory system, similar muscles, and a similar skeletal structure.

The classification of the Rat (*Rattus norvegicus*)

Kingdom: Animalia
Phylum: Chordata
Subphylum: Vertebrata
Class: Mammalia
Order: Rodentia
Family: Muridae
Genus: *Rattus*
Species: *norvegicus*

We will be looking at many different parts of the rat. Using the available material, instructions and diagrams, most students will be able to locate many structures for themselves. If after an earnest effort, you cannot find a structure, ask for assistance. Remember, this is a learning experience. It is quite permissible to discuss and observe other students' specimens. Compare your dissection with others, for animals often differ.

Dissection

Dissecting tools will be used to open the body cavity of the rat and observe the structures. **Keep in mind that dissecting does not mean "to cut up"; in fact, it means "to expose to view".**

Careful dissecting techniques will be needed to observe all the structures and their connections to other structures. You will not need to use a scalpel. Contrary to popular belief, a scalpel is not the best tool for dissection. Scissors are better because the point of the scissors can be pointed upwards to prevent damaging organs underneath. Always raise structures to be cut with your forceps before cutting, so that you can see exactly what is underneath and where the incision should be made. **Never cut more than is absolutely necessary to expose a part.**
