some instruction about common strategies for word problems. Students are often encouraged to write down the calculations they do. They are also encouraged to make a drawing or a sketch of the situation in the problem to help them understand the situation and to see what math operation is involved. Overall, most of the problems require two or more steps; however, some problem sets focus on differentiating what math operation should be used, and those only require a single step. Several problem sets are designed to help students master problems that involve equal size groups. These questions either ask for the total and are thus solved by multiplying, or they ask for the size of the group or for the quantity of the groups; one can write a missing number multiplication sentence such as $3 \times \underline{\quad} = 18$ or use division. The book also includes word problems with fractions, with large numbers, with money, geometry word problems, and challenges in the form of puzzle corners.
