

Background Reading: The Thirteen British Colonies: A Foundation for a New Nation

Introduction

In the vast expanse of North America, thirteen British colonies emerged along the Atlantic coast, each with distinct characteristics and societies that would lay the groundwork for the future United States. From the rugged, religiously motivated settlements of New England to the diverse, agricultural colonies of the South, these early communities formed the mosaic of early American life, setting the stage for the birth of a nation.

New England Colonies: Religion and Resistance

The New England colonies, including Massachusetts, Connecticut, Rhode Island, and New Hampshire, were founded primarily by Puritans seeking religious freedom. These settlers established a society centered around their church, with a strong emphasis on education, community, and a work ethic driven by their faith. The rocky soil and harsh climate of New England meant that large-scale farming was difficult; instead, these colonies thrived through fishing, lumber, and trade. The spirit of independence and self-governance that defined these colonies would later become a driving force in the fight for independence from British rule.

Middle Colonies: Diversity and Prosperity

The Middle Colonies, comprising New York, New Jersey, Pennsylvania, and Delaware, were characterized by their remarkable diversity. Settlers from various European countries, including the Netherlands, Sweden, and Germany, brought with them a variety of cultural practices, religions, and languages. This diversity contributed to a tolerant and relatively harmonious society, especially in Pennsylvania, founded by William Penn as a haven for Quakers and other persecuted religions. The fertile soil and moderate climate allowed these colonies to become the breadbasket of Colonial America, producing abundant crops of wheat and other grains.

Levstik,2004-07-13 In Teaching History for the Common Good Barton and Levstik present a clear overview of competing ideas among educators historians politicians and the public about the nature and purpose of teaching history and they evaluate these debates in light of current research on students historical thinking In many cases disagreements about what should be taught to the nation s children and how it should be presented reflect fundamental differences that will not easily be resolved A central premise of this book though is that systematic theory and research can play an important role in such debates by providing evidence of how students think how their ideas interact with the information they encounter both in school and out and how these ideas differ across contexts Such evidence is needed as an alternative to the untested assumptions that plague so many discussions of history education The authors review research on students historical thinking and set it in the theoretical context of mediated action an approach that calls attention to the concrete actions that people undertake the human agents responsible for such actions the cultural tools that aid and constrain them their purposes and their social contexts They explain how this theory allows educators to address the breadth of practices settings purposes and tools that influence students developing understanding of the past as well as how it provides an alternative to the academic discipline of history as a way of making decisions about teaching and learning the subject in schools Beyond simply describing the factors that influence students thinking Barton and Levstik evaluate their implications for historical understanding and civic engagement They base these evaluations not on the disciplinary study of history but on the purpose of social education preparing students for participation in a pluralist democracy Their ultimate concern is how history can help citizens engage in collaboration toward the common good In Teaching History for the Common Good Barton and Levstik discuss the contribution of theory and research explain the theory of mediated action and how it guides their analysis and describe research on children s and adults knowledge of and interest in history lay out a vision of pluralist participatory democracy and its relationship to the humanistic study of history as a basis for evaluating the perspectives on the past that influence students learning explore four principal stances toward history identification analysis moral response and exhibition review research on the extent to which children and adolescents understand and accept each of these and examine how the stances might contribute to or detract from participation in a pluralist democracy address six of the principal tools of history narrative structure stories of individual achievement and motivation national narratives inquiry empathy as perspective taking and empathy as caring and review research and conventional wisdom on teachers knowledge and practice and argue that for teachers to embrace investigative multi perspectival approaches to history they need more than
