Artificial Intelligence and the Future of Defense Stephan De Spiegeleire, Matthijs Maas, Tim Sweijts, 2017-05-17 Artificial intelligence AI is on everybody's minds these days Most of the world's leading companies are making massive investments in it Governments are scrambling to catch up Every single one of us who uses Google Search or any of the new digital assistants on our smartphones has witnessed first hand how quickly these developments now go Many analysts foresee truly disruptive changes in education employment health knowledge generation mobility etc But what will AI mean for defense and security In a new study HCSS offers a unique perspective on this question Most studies to date quickly jump from AI to autonomous mostly weapon systems

They anticipate future armed forces that mostly resemble today's armed forces engaging in fairly similar types of activities with a still primarily industrial kinetic capability bundle that would increasingly be AI augmented. The authors of this study argue that AI may have a far more transformational impact on defense and security whereby new incarnations of armed force start doing different things in novel ways. The report sketches a much broader option space within which defense and security organizations DSOs may wish to invest in successive generations of AI technologies. It suggests that some of the most promising investment opportunities to start generating the sustainable security effects that our polities, societies, and economies expect may lie in the realms of prevention and resilience. Also in those areas, any large-scale application of AI will have to result from a preliminary open-minded on all sides public debate on its legal, ethical, and privacy implications. The authors submit, however, that such a debate would be more fruitful than the current heated discussions about killer drones or robots. Finally, the study suggests that the advent of artificial superintelligence, i.e., AI that is superior across the board to human intelligence, which many experts now put firmly within the longer-term planning horizons of our DSOs, presents us with unprecedented risks but also opportunities that we have to start to explore. The report contains an overview of the role that intelligence, the computational part of the ability to achieve goals in the world, has played in defense and security throughout human history, a primer on AI, what it is, where it comes from, and where it stands today in both civilian and military contexts, a discussion of the broad option space for DSOs, it opens up 12 illustrative use cases across that option space, and a set of recommendations for especially small and medium-sized defense and security organizations.

Military Design Thinking Aaron P. Jackson, 2024-09-30. This book examines the newly emergent field of military design thinking, how it has been developed inside and outside of military doctrine, and the paradigms that underlie its key thinkers and methodologies. From the emergence of its initial methodologies in the late 1990s, military design thinking's development rapidly accelerated in the mid-2000s in response to perceived failures of existing military doctrine and practice to adapt to the wars of the early 21st century. To establish a foundation for exploring the significance of the challenge, military design thinking presented to dominant approaches to warfare, the early chapters in the book examine the ontology and epistemology of military doctrine, which is defined as a written expression of a military's institutional belief system regarding how to wage war. They also explain how attempts to incorporate military design thinking into doctrine ultimately led to its assimilation into this belief system, requiring military design thinkers to continue to explore and develop the field outside of doctrine. Since the mid-2010s, non-doctrinal military design methodologies have become increasingly prominent within several Western militaries, including the US, Canada, UK, Australia, and several European militaries. Later chapters offer an exploration of the paradigms underlying non-doctrinal as well as doctrinal design methodologies. This book highlights how the field has evolved, shows how military design thinking differs from its civilian equivalents developed in fields such as commerce and business management, and discusses how it may evolve in the near future. This book will be of much interest to students of military
