The Importance of a Bachelor Degree for the Entry-level Radiographer Shaunda Farrington-Hardwick, 2017 Currently entry level radiographers graduate from their accredited college with an associate

degree in applied science The graduate is then eligible to take the American Registry of Radiologic Technologist board exam This exam allows the radiographer to work in most radiology departments nationwide More than seventy five percent of states have additional licensing laws covering the practice of the radiographer It is required in those states to obtain a state license after one has obtained an ARRT license The other approximate twenty five percent do not require a state license however many states have pending laws enforcing state licensure potentially changing this percentage Obtaining state licensing in all fifty states would be the ideal situation for furthering the argument that the entry level radiographer should be required to obtain a bachelor degree The clinicians and providers that currently employ and utilize non licensed employees for radiography would be required to hire licensed personnel and increase the pay rates which will take from the business overhead Other improvements to their practice would include better diagnostic quality of exams with lower repeat rates which by manner will lower patient dose and increase patient and radiation safety which should be important to all radiographers
