

Respiratory System: Frog vs. Human

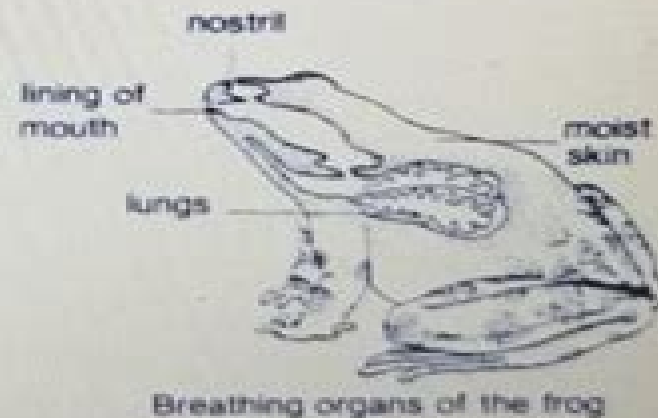

Human

Every cell in your body needs oxygen to live. The respiratory system includes the mouth/nose, trachea, lungs and a few other organs. They all work together to get oxygen into your alveoli which then pass the oxygen to your blood. The circulatory system then takes over and sends all the oxygen to every cell in your body so that it can survive. Carbon dioxide (waste) is taken out of your cells and sent back to the lungs through the blood to breathe out. In this way the respiratory system gets oxygen into your body and gets rid of the carbon dioxide it doesn't want.

Frog

Frog cells need oxygen to survive. Frogs have three different versions of the respiratory system. The first one is similar to a human, with lungs that take in oxygen and send it to the blood. They can also absorb oxygen directly into their lips without opening their mouths. This oxygen also makes its way to the lungs and then the blood. The third way a frog gets oxygen is through its skin. When it is in the water it absorbs oxygen directly from the water into its skin. There are blood vessels called capillaries right next to the skin that take the oxygen and send it on to the cells in the body. All three of these systems are able to release the carbon dioxide waste from the cells back into the air.

Difference Maker Christian Moore-Anderson,2024-08-09 Rarely have I been so convinced by the power of a new theoretical underpinning for a pedagogical technique such as the one presented here Helen Darlington Faculty Progress Leader for Science at South Wirral High School reviewed in School Science Review From the author of Biology Made Real Difference Maker reveals how to teach with students rather than merely teach to them Without slides or worksheets it shows how to provoke understanding through diagrams and dialogue bringing forth a distinct teaching approach Inside you ll find The recursive teaching model An evidence and theory inspired model for co constructing meaning with students rather than just telling them or having them discover alone Detailed examples of real lessons The exact diagrams I ve drawn in lessons and how I ve built them step by step with students Plus the questions I ve asked at what point in the lesson and why A theory informed how to guide for planning explanations How to explain biological concepts by applying the variation theory of learning and enactive cognitive science The resulting heuristic cuts planning time while vastly improving students understanding A theory informed how to guide for adaptive teaching Adapting is essential in the moment as you never know how students will interpret a new explanation With an original model for productive conversation I unveil the types of

questions that generate understanding and rich feedback for the teacher These looping conversations trigger a coordinated co regulation between teacher and students ensuring mutual understanding before moving forward A theory informed how to guide for co constructing stock and flow diagrams There are several benefits 1 building these models clarifies your understanding to yourself and your students and 2 teaching becomes more conceptual conversational adaptive and enjoyable I show how to read design and teach with them through detailed lesson examples Plus an appendix of 37 diagrams I ve used with my classes A new model of curricular content metacontent The curriculum is not just a list of content of equal weight There are fundamental ideas that give meaning to the rest of the curriculum By including this metacontent in teaching a shared way of seeing and talking about our subjects emerges The first type of metacontent I explain is a set of principles that I share with students and discuss during every topic These unifying principles avoid the feeling that biology is just a lot of facts to learn The second type is understanding understanding itself I share a taxonomy of understanding that allows students to grasp what I expect of them in every topic I provide example sentences for each level of understanding questions I ve asked to test my students understanding and answers my students have given A way of seeing and being Rather than a training manual with activities to follow this book provides teachers with a new conception of teaching learning and acting together in the classroom The novel insights of Difference Maker will inevitably change your perception **Educart CBSE**
