ACT TRANSPORT IN CELLS Reading and Comprehension

Directions: Read the following passage and answer the questions that follow.

Once upon a time, in the fascinating world of biology, there was a little cell named Cedric. Cedric was a hardworking cell, always bustling with activity. He had an important job — to maintain a balance of nutrients and ions inside his cell membrane. This was vital for his survival.

One sunny day, Cedric realized that he needed some specific nutrient to function properly. However, these nutrients were present in a lower concentration outside his cell than inside. Cedric needed a way to bring these nutrients inside, against the concentration gradient. This is where active transport came into play.

Active transport is like a superhero power for cells. It's a way cells can move substances against their natural flow, and it requires energy. Cedric knew he needed energy for this incredible feat.

Cedric's mitochondria, the powerhouses of the cell, began producing energy in the form of ATP (adenosine triphosphate). With his energy source ready, Cedric activated his transport proteins. These proteins acted like tiny gates, allowing specific nutrients to enter the cell. Cedric's transport proteins worked tirelessly, pumping the nutrients into his cell against the concentration gradient.

Cedric felt triumphant as he watched the nutrients accumulate inside his cell. He knew he was performing active transport, an essential process for maintaining the balance of substances in the cell. This helped him stay healthy and continue his work efficiently.

Now, Cedric could go on with his busy cell life, knowing that active transport was his secret weapon to keep his internal environment just right. With a confident smile, Cedric got moving. His essential work in the world of biology.

1. What is the main character in the story, and what is his job?
2. What did Cedric need to bring into his cell, and why was it challenging?
3. What is active transport, and how does it work in cells?
4. What is the energy source required for active transport?
5. Why is active transport important for cells like Cedric?
