Air-Sea Interaction F. Dobson, L. Hasse, R. Davis, 2012-12-06 During the past decade man's centuries old interest in marine meteorology and oceanography has broadened Ocean and atmosphere are now treated as coupled parts of one system the resulting interest in air sea interaction problems has led to a rapid growth in the sophistication of instruments and measurement techniques This book has been designed as a reference text which describes along with the instruments themselves the accumulated practical experience of experts engaged in field observations of air sea interactions It is meant to supplement rather than replace manuals on standard routine observations or instrumentation handbooks At the inception a textbook was planned which would contain only well tested methods and instruments It was quickly discovered that for the book to be useful many devices and techniques would have to be included which are still evolving rapidly The reader is therefore cautioned to take nothing in these pages for granted Certainly every contributor is an expert but while some are backed up by generations of published work others are pioneers The choice of topics of course is debatable The types of observations included are not exhaustive and topics such as marine aerosols and radio tracers are omitted as was the general subject of remote sensing which was felt to be too broad and evolving too rapidly The guideline adopted in limiting size was maximum usefulness to a trained experimentalist new to the field
