*Pathologic Findings in Stranded Marine Mammals: A Global Perspective* Gregory Dana Bossart, Alvin Cyril Camus, Debra Lee Miller, Stephen Raverty, 2022-02-09 This project is posthumously dedicated to Dr Gregory Dana Bossart Whether you knew him as colleague mentor friend family member or simply knew of him you could not help but be awestruck by his dedication intelligence thoughtfulness work ethic and passion for scientific inquiry especially for conservation of the marine environment Many of his publications were seminal in marine mammal health including infectious environmental and zoonotic diseases As we collected manuscripts for this special Frontiers edition it was heartwarming to hear the comments from contributors So many research scientists field biologists and veterinarians could easily have given up and said I just can't do this now especially with the added challenges posed by the current COVID 19 pandemic Instead contributors from around the world were determined to contribute to this collection because of their inspiration and shared commitment with Greg's vision The love and admiration within the marine community for Greg is phenomenal With that said we would be remiss if we did not say a few words about Greg as a mentor and friend Greg had a knack for helping students realize their abilities and pursue their own independent contributions to the marine mammal community He shared in their successes and worked tirelessly to facilitate their aspirations Greg would involve students early career scientists and colleagues in projects introduce them to collaborators and promote them and their work Greg was a genuinely caring person When he asked you how are you doing he honestly wanted to know He was always there ready to listen and provide guidance If you were to ask Greg what was most important to him in life he would say God family and marine life and one could argue that he had a special fondness for manatees He believed in the beauty of nature and that God had a hand in all of it He was in pursuit of ensuring that we all share this earth responsibly and sustainably We miss Greg dearly but honor and celebrate him as we carry on in our pursuits      Oncogene Techniques Peter K. poultry from diseases Understanding genetic control of immune response can be utilized to improve chicken health Adult F2 hens were generated by mating highly inbred males of two MHC congenic Fayoumi lines with G B1 Leghorn hens Antibody response after Salmonella enteritidis SE vaccination at day 10 and sheep erythrocyte SRBC and killed Brucella abortus BA immunizations at 19 and 22 weeks were measured Agglutinating antibody titer at 7 days after primary immunization and mean titer of the final three samples day 18 32 and 63 after 2nd immunization were used as parameters for primary and equilibrium phases respectively Secondary phase parameters of minimum Ymin maximum titers Ymax and time needed to achieve minimum Tmin and maximum Tmax titers were estimated from seven post secondary titers using a nonlinear regression model Both candidate gene and genome scan approaches were used to identify quantitative trait loci QTL affecting antibody response to SE vaccination and antibody response kinetics to SRBC and BA Using the genome scan approach QTL affecting immune response to SRBC and BA were detected by a stepwise process that culminated in interval mapping Five significant QTL were detected at the 5% chromosome wise level on chicken chromosomes 3 5 6 and Z suggesting that regions on chromosomes 3 5 6 and Z contain QTL affecting antibody kinetics to SRBC and BA Single nucleotide polymorphisms SNP of 15 immunity related genes were identified Interferon gamma immunoglobulin light chain interleukin 2 MHC class I alpha 1 alpha 2 class II beta 1 and transforming growth factor beta 2 3 and 4 SNP were significantly associated with antibody responses to SE vaccination or antibody response kinetics to SRBC and BA or both For some candidate genes significant associations were primarily detected in the lineage of the M5 1 grandsire but in that of the M15 2 grandsire on the others Strong interactions of the MHC with candidate genes on antibody response were indicated from the study All the genes characterized in the present study are therefore strong potential candidates for application in marker assisted selection to improve vaccine response and immunocompetence in chickens
