Hox Genes Jean S. Deutsch, 2011-01-11 In his 1894 book Materials for the Study of Variation William Bateson coined the term Homoeosis with the following prose The case of the modification of the antenna of an insect into a foot of the eye of a Crustacean into an antenna of a petal into a stamen and the like are examples of the same kind It is desirable and indeed necessary that such Variations which consist in the assumption by one member of a Meristic series of the form or characters proper to other members of the series should be recognized as constituting a distinct group of phenomena I therefore propose the term HOMOEOSIS for the essential phenomenon is not that there has merely been a change but that something has been changed into the likeness of something else The book was intended as a listing of the kinds of naturally occurring variation that could act as a substrate for the evolutionary process and Bateson took his examples from collections both private and in museums of materials displaying morphological oddities Interestingly the person who also coined the term Genetics proffered little in the way of speculation on the possible genetic underpinnings of these oddities It wasn't until the early part of the next century that these changes in meristic series were shown to be heritable
