Protein-Nucleic Acid Interactions Phoebe A. Rice, Carl C. Correll,2008-05-22 The structural biology of protein nucleic acid interactions is in some ways a mature field and in others in its infancy High resolution structures of protein DNA complexes have been studied since the mid 1980s and a vast array of such structures has now been determined but surprising and novel structures still appear quite frequently High resolution structures of protein RNA complexes were relatively rare until the last decade Propelled by advances in technology as well as the realization of RNA s importance to biology the number of example structures has ballooned in recent years New insights are now being gained from comparative studies only recently made possible due to the size of the database as well as from careful biochemical and biophysical studies As a result of the explosion of research in this area it is no longer possible to write a comprehensive review Instead current review articles tend to focus on particular subtopics of interest This makes it difficult for newcomers to the field to attain a solid understanding of the basics One goal of this book is therefore to provide in depth discussions of the fundamental principles of protein nucleic acid interactions as well as to illustrate those fundamentals with up to date and fascinating examples for those who already possess some familiarity with the field The book also aims to bridge the gap

between the DNA and the RNA views of nucleic acid protein recognition which are often treated as separate fields. However, this is a false dichotomy because protein-DNA and protein-RNA interactions share many general principles. This book therefore includes relevant examples from both sides and frames discussions of the fundamentals in terms that are relevant to both. The monograph approaches the study of protein-nucleic acid interactions in two distinctive ways. First, DNA-protein and RNA-protein interactions are presented together. Second, the first half of the book develops the principles of protein-nucleic acid recognition, whereas the second half applies these to more specialized topics. Both halves are illustrated with important real-life examples. The first half of the book develops fundamental principles necessary to understand function. An introductory chapter by the editors reviews the basics of nucleic acid structure. Jen Jacobsen and Jacobsen discuss how solvent interactions play an important role in recognition, illustrated with extensive thermodynamic data on restriction enzymes. Marmorstein and Hong introduce the zoology of the DNA-binding domains found in transcription factors and describe the combinatorial recognition strategies used by many multiprotein eukaryotic complexes. Two chapters discuss indirect readout of DNA sequence in detail. Berman and Lawson explain the basic principles and illustrate them with in-depth studies of CAP, while in their chapter on DNA bending and compaction, Johnson, Stella, and Heiss highlight the intrinsic connections between DNA bending and indirect readout. Horvath lays out the fundamentals of protein recognition of single-stranded DNA and single-stranded RNA and describes how they apply in a detailed analysis of telomere end-binding proteins. Nucleic acids adopt more complex structures. Lilley describes the conformational properties of helical junctions and how proteins recognize and cleave them. Because RNA readily folds due to the stabilizing role of its 2'-hydroxyl groups, Li discusses how proteins recognize different RNA folds, which include duplex RNA. With the fundamentals laid out, discussion turns to more specialized examples taken from important aspects of nucleic acid metabolism. Schroeder discusses how proteins chaperone RNA by rearranging its structure into a functional form. Berger and Dong discuss how topoisomerases alter the topology of DNA and relieve the superhelical tension introduced by other processes such as replication and transcription. Dyda and Hickman show how DNA transposases mediate genetic mobility, and Van Duyne discusses how site-specific recombinases cut and paste DNA. Horton presents a comprehensive review of the structural families and chemical mechanisms of DNA nucleases, whereas Li, in her discussion of RNA-protein recognition, also covers RNA nucleases. Lastly, Ferré-D'Amar shows how proteins recognize and modify RNA transcripts at specific sites. The book also emphasizes the impact of structural biology on understanding how proteins interact with nucleic acids and is intended for advanced students and established scientists wishing to broaden their horizons.

**Spherical Nucleic Acids** Chad A. Mirkin, 2021-10-14 Spherical nucleic acids (SNAs) comprise a nanoparticle core and a densely packed and highly oriented nucleic acid shell. They have novel structure-dependent properties that differ from those of linear nucleic acids and that makes them useful in chemistry, biology, the life sciences, medicine, materials science, and engineering. This book is a reprint volume that compiles 101 key papers that

have been published by the Mirkin Group at Northwestern University USA and their collaborators over the past more than two decades Volume 1 provides an overview and a historical framework of SNAs and discusses their enabling features which set them apart from all other forms of matter Volume 2 covers the general design rules for colloidal crystal engineering with DNA spanning the building blocks and DNA and RNA based programmable bonds that can be utilized in preparing such structures Volume 3 continues the discussion of colloidal crystallization processes and routes to hierarchical assembly featuring dynamic nanoparticle superlattices and lattices prepared on surfaces or via templating strategies and explores what one can uniquely learn from and do with colloidal crystals prepared from nucleic acid functionalized nanomaterials in optics plasmonics and catalysis Volume 4 covers the role of SNAs in biomedicine especially as diagnostic probes both inside and outside of cells and treatments based on gene regulation and immunotherapy
