Analytics in Healthcare Christo El Morr, Hossam Ali-Hassan, 2019-01-21 This book offers a practical introduction to healthcare analytics that does not require a background in data science or statistics. It presents the basics of data analytics and tools and includes multiple examples of their applications in the field. The book also identifies practical challenges that fuel the need for analytics in healthcare as well as the solutions to address these problems. In the healthcare field, professionals have access to vast amounts of data in the form of staff records, electronic patient records, clinical findings, diagnosis, prescription, drug, medical imaging, procedure, mobile health resources, etc. Managing the data and analyzing it to properly understand it and use it to make well-informed decisions can be a challenge for managers and healthcare professionals. A new generation of applications, sometimes referred to as end-user analytics or self-serve analytics, are specifically designed for non-technical users such as managers and business professionals. The ability to use these increasingly accessible tools with the abundant data requires a basic understanding of the core concepts of data analytics and interpretation of outcomes. This book is a resource for such individuals to demystify and learn the basics of data management and analytics for healthcare while also looking towards future directions in the field.

Advanced Prognostic Predictive Modelling in Healthcare Data Analytics Sudipta Roy, Lalit Mohan Goyal, Mamta Mittal, 2021-04-22 This book discusses major technical advancements and research findings in the field of prognostic modelling in healthcare image and data analysis. The use of prognostic modelling as predictive models to solve complex problems of data mining and analysis in healthcare is the feature of this book. The book examines the recent technologies and studies that reached the practical level and becoming available in preclinical and clinical practices in computational intelligence. The main areas of interest covered in this book are highest quality original work that contributes to the basic science of processing, analysing and utilizing all aspects of advanced computational prognostic modelling in healthcare image and data analysis.

Toolkit for analysis and use of routine health facility data. Integrated health services analysis World Health Organization, 2023-06-16 This document provides guidance on the integrated analysis and use at district and facility levels of data collected from health facilities through routine health information systems RHIS The guidance includes a sample set of indicators with recommended ways of visualizing these indicators in standard dashboards

as well as guidance on interpretation and use of the indicators

Objectives The guidance illustrates integrated analysis of RHIS data at district and facility levels. It aims to build understanding and skills in a recommended analytic approach that focuses on a minimum set of indicators organized into three cross-cutting groups, uses standard visualizations to facilitate data interpretation, charts and tables organized into integrated dashboards that can be automatically updated in an electronic database, supports use of dashboards for decision making as part of district meetings, supervision visits and feedback to health facilities.

Target audience This guidance targets managers and analysts at the level of the district health system. It may also be useful to staff making operational decisions at any subnational level. The guidance may also be useful to implementing partners, donors, academics and others involved in using data to strengthen health service delivery at subnational levels.
