Arithmetic Counts! Paul Shoecraft,2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget

Large-Scale Studies in Mathematics Education James A. Middleton,Jinfa Cai,Stephen Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning

developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community. In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them. This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies. **Course and Curriculum Improvement Projects: Mathematics, Science, Social Sciences** National Science Foundation (U.S.),1974 **Diversity Dimensions in Mathematics and Language Learning** Annemarie Fritz,Erkan Gürsoy,Moritz Herzog,2021-06-08 Extensive research is available on language acquisition and the acquisition of mathematical skills in early childhood. But more recently research has turned to the question of the influence of specific language aspects on acquisition of mathematical skills. This anthology combines current findings and theories from various disciplines such as neuro psychology linguistics didactics and anthropology. Levin,2012-01-01 The twin objectives of the series Psychological Perspectives on Contemporary Educational Issues are 1 to identify issues in education that are relevant to professional educators and researchers and 2 to address those issues from research and theory in educational psychology psychology and related disciplines. The present volume consisting of two focal chapters commentaries and final responses targets instructional strategies for improving students learning in two of the traditional three R areas reading and arithmetic mathematics in the elementary school grades. The focal chapters in those two skill areas are written by leading contributors to the reading and mathematics research literatures Cathy Collins Block for the reading section and Douglas Clements and Julie Sarama for the mathematics section. Few would dispute the essentiality of these two curricular domains in laying the foundation for the development of students competencies in a vast array of academic disciplines in both the in and out of school years that lie ahead. The present volume is intended for practitioners and researchers who are seeking the latest instructional research based strategies for improving students early reading and mathematics performance. **What are the Needs in Precollege Science, Mathematics, and Social Science Education?** ,1980 Mathematics Curriculum in School Education Yeping Li,Glenda Lappan,2013-11-19 Mathematics curriculum which is often a focus in education reforms has not received extensive research attention until recently.
