International Finance Discussion Papers ,2008 *Cross-border Water Trade: Legal and Interdisciplinary Perspectives* Piotr Szwedo,2018-11-12 Cross border Water Trade Legal and Interdisciplinary Perspectives is a critical assessment of one of the growing problems faced by the international community the global water deficit Cross border water trade is a solution that generates ethical and economic but also legal challenges Economic humanitarian and environmental approaches each highlight different and sometimes conflicting aspects of the international commercialization of water Finding an equilibrium for all the dimensions required an interdisciplinary path incorporating certain perspectives of natural law The significance of such theoretical underpinnings is not merely academic but also quite practical with concrete consequences for the legal status of water and its fitness for international trade **Current Account Sustainability and Relative Reliability** Stephanie E. Curcuru,2008 The sustainability of the large and persistent U S current account deficits is one of the biggest issues currently being confronted by international macroeconomists Some very plausible theories suggest that the substantial global imbalances can continue in a benign manner other equally plausible theories predict a disorderly resolution and in general it is very difficult to discern between competing theories To inform the debates we view competing theories through the perspective of the relative reliability of the data the theories rely on Our analysis of the dark matter theory is cursory from a relative reliability perspective it fails as it is built on the assumption that an item that is largely unmeasured is the most accurate component of the entire set of international accounts Similarly the best data currently available suggest that U S returns differentials are much smaller than implied by the exorbitant privilege theory Our analysis opens up questions about potential inconsistencies in the international accounts which we address by providing rough estimates of various holes in the accounts *Exploiting Linked Data and Knowledge Graphs in Large Organisations* Jeff Z.
