Robin Harris,Viktor I. Korolchuk,2019-02-18 This new volume in the Subcellular Biochemistry series will focus on the biochemistry and cellular biology of aging processes in human cells The chapters will be written by experts in their respective fields and will focus on a number of the current key areas of research in subcellular aging research Main topics for discussion are mitochondrial aging protein homeostasis and aging and the genetic processes that are involved in aging There will also be chapters that are dedicated to the study of the roles of a variety of vitamins and minerals on aging and a number of other external factors microbiological ROS inflammation nutrition This book will provide the reader with a state of the art overview of the subcellular aging field This book will be published in cooperation with a second volume that will discuss the translation of the cell biology of aging to a more clinical setting and it is hoped that the combination of these two volumes will bring a deeper understanding of the links between the cell and the body during aging *Stem Cell Biology and Regenerative Medicine* Charles Durand,Pierre Charbord,2022-09-01 The study of stem cell biology is under intensive investigation Because stem

cells have the unique capability to self renew and differentiate into one or several cell types they play a critical role in development tissue homeostasis and regeneration Stem cells also constitute promising cell candidates for cell and gene therapy The aim of this book is to provide readers and researchers with timely and accurate knowledge on stem cell biology and regenerative medicine This book will cover many topics in the field and is based on conferences given by recognized scientists involved in the international master course on stem cell biology at Sorbonne Universit in Paris *Fetal/Embryonic Hematopoietic Progenitors and Their Impact on Adult Diseases* Silvia Brunelli,Antonella Ellena Ronchi,Charlotta Boiers,Emanuele Azzoni,2021-10-01 Systems Biology and the Challenge of Deciphering the Metabolic Mechanisms Underlying Cancer Osbaldo Resendis-Antonio,Christian Diener,2017-11-23 Since the discovery of the Warburg effect in the 1920s cancer has been tightly associated with the genetic and metabolic state of the cell One of the hallmarks of cancer is the alteration of the cellular metabolism in order to promote proliferation and undermine cellular defense mechanisms such as apoptosis or detection by the immune system However the strategies by which this is achieved in different cancers and sometimes even in different patients of the same cancer is very heterogeneous which hinders the design of general treatment options Recently there has been an ongoing effort to study this phenomenon on a genomic scale in order to understand the causality underlying the disease Hence current omics technologies have contributed to identify and monitor different biological pieces at different biological levels such as genes proteins or metabolites These technological capacities have provided us with vast amounts of clinical data where a single patient may often give rise to various tissue samples each of them being characterized in detail by genomescale data on the sequence expression proteome and metabolome level Data with such detail poses the imminent problem of extracting meaningful interpretations and translating them into specific treatment options To this purpose Systems Biology provides a set of promising computational tools in order to decipher the mechanisms driving a healthy cell s metabolism into a cancerous one However this enterprise requires bridging the gap between large data resources mathematical analysis and modeling specifically designed to work with the available data This is by no means trivial and requires high levels of communication and adaptation between the experimental and theoretical side of research **Hematopoiesis: Learning from in vitro and in vivo Models** Jon Frampton,Anskar Y. H. Leung,Xiaotian Zhang,Jianwei Wang,Yiyue Zhang,2022-04-28 *Encyclopedia of Bone Biology*,2020-06-26 Encyclopedia of Bone Biology Three Volume Set covers hot topics from within the rapidly expanding field of bone biology and skeletal research enabling a complete understanding of both bone physiology and its relation to other organs and pathophysiology This encyclopedia will serve as a vital resource for those involved in bone research research in other fields that cross link with bone such as metabolism and immunology and physicians who treat bone diseases Each article provides a comprehensive overview of the selected topic to inform a broad spectrum of readers from advanced undergraduate students to research professionals Chapters also explore the latest advances and hot topics that have emerged in recent years

including the Hematopoietic Niche and Nuclear Receptors In the electronic edition each chapter will include hyperlinked references and further readings as well as cross references to related articles Incorporates perspectives from experts working within the domains of biomedicine including physiology pathobiology pharmacology immunology endocrinology orthopedics and metabolism Provides an authoritative introduction for non specialists and readers from undergraduate level upwards as well as up to date foundational content for those familiar with the field Includes multimedia features cross references and color images videos *Cell Biology and Translational Medicine, Volume 8* Kursad Turksen, 2020-06-09 Much research has focused on the basic cellular and molecular biological aspects of stem cells Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies However more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions This book series Cell Biology and Translational Medicine CBTMED as part of SpringerNature s longstanding and very successful Advances in Experimental Medicine and Biology book series has the goal to accelerate advances by timely information exchange Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas This current book is the eight volume of a continuing series **Microenvironment-Derived Stem Cell Plasticity** Jelena Krstic, Marietta Herrmann, Ivana Gadjanski, Slavko Mojsilovic, 2017-12-21 Plasticity is the hallmark of stem cells At the same time stem cells like any other cell type are influenced by their microenvironment and respond to it accordingly A specific microenvironment is defined by a variety of factors including biological and chemical factors cell cell interactions but also metabolic and mechanical cues Such dynamic and specialized microenvironment where the stem cells reside is considered a stem cell niche Tissue injury as well as malignant tissue alterations lead to changes in the niche influencing the plasticity and biology of residing stem cells Similarly the niche changes upon tissue damage which eventually induces differentiation of stem cells and ultimately regeneration of the tissue Cancer Stem Cells: Emerging Concepts and Future Perspectives in Translational Oncology Sadegh Babashah, 2015-11-12 The concept of cancer stem cells has great clinical implications This is due to the fact that small subpopulations of these cells have been identified in a variety of neoplastic conditions ranging from solid tumors to liquid malignancies Although there are some huge gaps in our current understanding of the role played by cancer stem cells in cancer biology a growing body of evidence provides strong support for the principal functions of these cells in tumorigenesis This has represented the potential of cancer stem cells in the development of novel and innovative tools for the treatment of metastatic tumors This book aims to offer a broad framework for obtaining insight into the state of the art knowledge on cancer stem cell biology and highlight the therapeutic implications of these cells in the future of clinical oncology *The Retinoids* Pascal Dollé, Karen Niederreither, 2015-06-15 The Retinoids Biology Biochemistry and Disease

provides an overview and synthesis of the retinoid molecules from basic biology to mechanisms of diseases and therapy Divided into five sections the book covers retinoic acid signaling from biochemical genetic developmental and clinical perspectives The text is divided into five sections the first of which examines vitamin A metabolic and enzymatic pathways Focus then shifts to the role of retinoic acid signaling in development and then to retinoids and physiological function The book concludes with chapters on retinoids disease and therapy Comprehensive in scope and written by leading researchers in the field The Retinoids Biology Biochemistry and Disease will be an essential reference for biologists biochemists geneticists and developmental biologists as well as for clinicians and pharmacists engaged in clinical research involving retinoids

Exosomes as Therapeutic Systems Robert Steven Conlan,Deyarina Gonzalez,Bruna Corradetti,Ines Mendes Pinto,2021-10-01 Biochemistry and Cell Biology of Ageing: Part II Clinical Science J. Robin Harris,Viktor I.

Korolchuk,2019-03-19 This volume of the subcellular Biochemistry series will attempt to bridge the gap between the subcellular events that are related to aging as they were described in the first volume of this set of two books and the reality of aging as this is seen in clinical practice All chapters will start from the biochemistry or cell biology where the data is available and work up towards the understanding that we have of aging in the various areas that are related to the subject Key focus points for this volume are nutrition external factors and genetics on aging There will also be chapters that will focus on various organs or tissues in which aging has been well studied like the eyes the muscles the immune system and the bones The aim of the book project and the book project that is published in concert with this volume is to bring the subcellular and clinical areas into closer contact *Non-Genetic Heterogeneity in Development and Disease* Mohit Kumar Jolly,Jean-Pascal Capp,Ankur Sharma,2021-11-01
