Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Label one of the **skulls** below as human and the other as a chimpanzee skull.

	Human			Chimpanzee
---	-------	--	---	------------

2. What features did you use to identify which skull was human and which was chimpanzee?

The chimpanzee has a longer skull and larger jaw bone.

Gizmo Warm-up

In 1924, a fossilized skull that looked very similar to a chimp skull was discovered. But the skull most definitely did not belong to a chimp. The location of the **foramen magnum**—a hole in the skull where the spinal cord exits—indicated that the individual was **bipedal**, or walked on two legs. This fossil was some of the earliest evidence of human evolution. Using the *Human Evolution – Skull Analysis* Gizmo, you will discover some of the ways that skulls can be used to learn about human evolution. Start by comparing two modern **hominids**: a human and a chimpanzee.

1. Examine the **Front view** of the *Homo sapiens* (modern human) skull, use the **Select skull** menu to examine the same view of the *Pan troglodytes* (chimp) skull.

Then,

How do the skulls compare?

The human skull has a smaller jaw, smaller teeth, and a larger forehead. Chimpanzees also have a larger nose.

Origins of Anatomically Modern Humans Doris V. Nitecki, Matthew H. Nitecki, 2013-11-11 This volume is based on the Field Museum of Natural History Spring Systematics Symposium held in Chicago on May 11 1991 The financial support of Ray and Jean Auel and of the Field Museum is gratefully acknowledged When we teach or write we present only those elements that support our arguments We avoid all weak points of our debate and all the uncertainties of our models Thus we offer hypotheses as facts Multiauthored books like ours which simultaneously advocate and question diverse views avoid the pitfalls and lessen the impact of indoctrination In this volume we analyze the anthropological and biological disagreements and the positions taken on the origins of modern humans point out difficulties with the interpretations and suggest that the concept of the human origin can be explained only when we first attempt to define *Homo sapiens sapiens* One of the major controversies in physical anthropology concerns the geographic origin of anatomically modern humans It is undisputed due to the extensive research of the Leakeys and their colleagues that the family Hominidae originated in Africa but the geographic origin of *Homo sapiens sapiens* is less concretely accepted Two schools of thought exist on this topic Human Evolution Joseph Benjamin Birdsell, 1975 **Human Evolution** George D. Brown, 1995 This work is intended for use with supporting material in an introductory level multidisciplinary college course Its audience are students who are not majoring in one of the sciences directly pertaining to human origins e.g. biology geology and anthropology This text provides a better understanding of the fundamental aspects of human evolution by placing them in an integrated context with all of nature Pref

The Human Evolution Source Book Russell L. Ciochon, John G. Fleagle, 1993 M. CREATED *Multivariate Statistical Methods in Physical Anthropology* G.N. van Vark, W.W. Howells, 2012-12-06 Physical anthropologists like other research workers are recognizing that the standard multivariate statistical techniques of recent decades are in need of refinement and greater precision Increasingly it is felt that more sophisticated methods are called for specifically designed for the materials and problems at issue To this end the editors were asked by organizers of the First Intercongress of the International Union of Anthropological and Ethnological Sciences to develop a symposium on this general subject With the title of this book the symposium was held in Amsterdam on April 23-25 1981 Invited were mathematical statisticians who were known to have an acquaintance with and interest in anthropological problems together with anthropologists and human geneticists who consider multivariate methodology essential for their research This volume constitutes an updated and revised selection from among the papers presented together with a few supplementary papers by authors who were not present but whose work fills out the intended coverage and makes the volume more complete with respect to the state of affairs in the field The papers are devoted both to new methodology and to its practical application Mathematical statisticians may wish to know more about the biological nature and the kinds of materials and samples on which mathematical thinking can be exercised Anthropologists as practitioners may not be fully aware of the possibilities and limitations in particular mathematical models

Excel HSC Biology Diane Alford, Jennifer Hill, 2008 Human Evolution Brian Regal, 2004-11-23 A fascinating and wide ranging look at the controversies surrounding the search for the origins of the human species Written for those new to the subject *Human Evolution A Guide to the Debates* presents the remarkable history of our understanding of human origins as it developed from the 1800s to the present Most works on this topic focus narrowly on one individual theory or debate In contrast *Human Evolution* draws from a wide range of sources to offer a fully rounded portrait of the entire field The chapters of the book follow a basic chronological order covering the issues personalities and discoveries that are central to the questions and controversies surrounding human evolution The coverage draws from a wide range of associated topics and examines not only controversies of a religious nature but also those that have little to do with religion allowing readers to weigh the information come to their own conclusions and even begin their own debates Human Evolution, 1988 **The Evolution of the Human Head** Daniel E. Lieberman, 2011-05-03 In one sense human heads function much like those of other mammals We use them to chew smell swallow think hear and so on But in other respects the human head is quite unusual Unlike other animals even our great ape cousins our heads are short and wide very big brained snoutless largely furless and perched on a short nearly vertical neck Daniel E Lieberman sets out to explain how the human head works and why our heads evolved in this peculiarly human way Exhaustively researched and years in the making this innovative book documents how the many components of the head function how they evolved since we diverged from the apes and how they interact in diverse ways both functionally and developmentally causing them to be highly integrated This integration not only permits the head's many units to accommodate each other as they grow and work but also facilitates evolutionary change

Lieberman shows how when and why the major transformations evident in the evolution of the human head occurred The special way the head is integrated Lieberman argues made it possible for a few developmental shifts to have had widespread effects on craniofacial growth yet still permit the head to function exquisitely This is the first book to explore in depth what happened in human evolution by integrating principles of development and functional morphology with the hominin fossil record The Evolution of the Human Head will permanently change the study of human evolution and has widespread ramifications for thinking about other branches of evolutionary biology

Evolution of the Human Diet Peter S. Ungar, 2007 We are interested in the evolution of hominin diets for

several reasons One is the fundamental concern over our present day eating habits and the consequences of our societal choices such as obesity prevalent in some cultures and starvation in others Another is that humans have learned to feed themselves in extremely varied environments and these adaptations which are fundamentally different from those of our closest biological relatives have to have had historical roots of varying depth The third and the reason why most paleoanthropologists are interested in this question is that a species trophic level and feeding adaptations can have a strong effect on body size locomotion life history strategies geographic range habitat choice and social behavior Diet is key to understanding the ecology and evolution of our distant ancestors and their kin the early hominins A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors Paleontologists archaeologists primatologists nutritionists and other researchers all contribute pieces to the puzzle This volume has at its core four main sections Reconstructed diets based on hominin fossils tooth size shape structure wear and chemistry mandibular biomechanics Archaeological evidence of subsistence stone tools and modified bones Models of early hominin diets based on the diets of living primates both human and non human paleoecology and energetics Nutritional analyses and their implications for evolutionary medicine New techniques for gleaning information from fossil teeth bones and stone tools new theories stemming from studies of paleoecology and new models coming from analogy with modern humans and other primates all contribute to our understanding When these approaches are brought together they offer an impressive glimpse into the lives of our distant ancestors The contributions in this volume explore the frontiers of our knowledge in each of these disciplines as they address the knowns the unknowns and the unknowables of the evolution of hominin diets
