Control of Salmonella and Other Bacterial Pathogens in Low-Moisture Foods Richard Podolak,Darryl G. Black,2017-09-05 The first and only comprehensive reference solutions manual for managing food safety in low moisture foods The first book devoted to an increasingly critical public health issue Control of Salmonella and Other Bacterial Pathogens in Low Moisture Foods reviews the current state of the science on the prevalence and persistence of bacterial pathogens in low moisture foods and describes proven techniques for preventing food contamination for manufacturers who produce those foods Many pathogens such as Salmonella due to their enhanced thermal resistance in dry environments can survive the drying process and may persist for prolonged periods in low moisture foods especially when stored in refrigerated environments Bacterial contamination of low moisture foods such as peanut butter present a vexing challenge to food safety and especially now in the wake of widely publicized food safety related events food processors urgently need up to date practical information on proven measures for containing the risk of contamination While much has been written on the subject until now it was scattered throughout the world literature in scientific and industry journals The need for a comprehensive treatment of the subject has never been greater and now this book satisfies that need Discusses a wide variety of foods and evaluates multiple processing platforms from the standpoint of process validation of all food safety objectives for finished food products Takes a practical approach integrating the latest scientific and technological advances in a handy working resource Presents all known sources and risk factors for pathogenic bacteria of concern in the manufacturing environment for low moisture water activity products Characterizes the persistence and thermal resistance of bacterial pathogens in both the environment and most low moisture food products Control of Salmonella and Other Bacterial Pathogens in Low Moisture Foods is a much needed resource for

food microbiologists and food industry scientists as well as managers and executives in companies that produce and use low moisture foods It also belongs on the reference shelves of food safety regulatory agencies worldwide *Ranking of low-moisture foods in support of microbiological risk management* World Health Organization, Food and Agriculture Organization of the United Nations, 2021-02-28 This book a collaborative effort by the FAO and WHO evaluates the risks associated with low moisture foods LMF and their potential to harbor foodborne pathogens despite their low water content It systematically reviews and ranks various categories of LMF such as cereals dried protein products and spices based on their food safety risks The book aims to assist in risk management by providing a comprehensive analysis of data related to LMF associated outbreaks thus helping to develop effective food safety interventions It is intended for food safety professionals and policymakers involved in managing foodborne risks

Ranking of low-moisture foods in support of microbiological risk management: Meeting report and systematic review Food and Agriculture Organization of the United Nations, World Health Organization, 2022-07-22 Low moisture foods LMF are foods that are naturally low in moisture or are produced from higher moisture foods through drying or dehydration processes These foods typically have a long shelf life and have been perceived for many years to not represent microbiological food safety risk hazards However in recent years a number of outbreaks of foodborne illnesses linked to LMF has illustrated that despite the fact that microorganisms cannot grow in these products bacteria do have the possibility to persist for long periods of time in these matrices Responding to a request from the Codex Committee on Food Hygiene CCFH the Food and Agriculture Organization of the United Nations FAO and the World Health Organization WHO implemented a series of activities aimed at collating and analysing the available information on microbiological hazards related to LMF and ranking the foods of greatest concern from a microbiological food safety perspective Seven categories of LMF which were ultimately included in the ranking process and the output of the risk ranking in descending order was as follows cereals and grains dried protein products spices and dried herbs nuts and nut products confections and snacks dried fruits and vegetables and seeds for consumption

Methods of Measuring Moisture in Building Materials and Structures Lars-Olof Nilsson, 2018-04-13 RILEM TC 248 MMB was established in 2012 with the main aim to improve and distribute knowledge related to moisture measurement in construction materials in various scientific and industrial applications Properties and performance of building materials and structures are influenced to a large extent by the moisture conditions in the materials Obvious examples are heat conductivity shrinkage and creep transport properties most types of deterioration discoloration etc For research and applications the moisture conditions must be quantified by measurements in the laboratory or under field conditions There is much variation in methods being used even within the same topic in different countries both with regard to materials and to applications No consensus whatsoever does exist For the construction industry it is important to be able to quantify the moisture conditions in an accurate way in various applications This state of the art report is divided into two parts Principles and Applications with altogether 28 chapters on various moisture measuring principles and a number of applications

Nondestructive Evaluation of Wood Forest Service (U S), Forest Products Laboratory (U S), Robert J. Ross, 2015 Nature's engineering of wood through genetics wind and weather creates a wide variability in wood as a material Consequently manufacture and users of wood products are frequently

frustrated in dealing with the forest resource Manufacturers sometimes argue that wood is difficult to consistently process into quality products because of the wide range of properties that exist in this raw material Users of wood products can be equally frustrated with the performance variability found in finished products Nondestructive evaluation NDE technologies have contributed significantly toward eliminating the cause of these frustrations NDE technologies have been developed and are currently used in lumber and veneer grading programs that result in engineered materials that have consistent well defined performance characteristics This brief volume explores some of the processes that are used to manufacture wood including green wood technology and provides a bit of history to wood production and its uses too Other products that may interest you from the US Forest Service can be found at this link <https://bookstore.gpo.gov/agency/819>

Hydro-Environmental Analysis James L. Martin, 2013-12-04 Focusing on fundamental principles Hydro Environmental Analysis Freshwater Environments presents in depth information about freshwater environments and how they are influenced by regulation It provides a holistic approach exploring the factors that impact water quality and quantity and the regulations policy and management methods that are necessary to maintain this vital resource It offers a historical viewpoint as well as an overview and foundation of the physical chemical and biological characteristics affecting the management of freshwater environments The book concentrates on broad and general concepts providing an interdisciplinary foundation The author covers the methods of measurement and classification chemical physical and biological characteristics indicators of ecological health and management and restoration He also considers common indicators of environmental health characteristics and operations of regulatory control structures applicable laws and regulations and restoration methods The text delves into rivers and streams in the first half and lakes and reservoirs in the second half Each section centers on the characteristics of those systems and methods of classification and then moves on to discuss the physical chemical and biological characteristics of each In the section on lakes and reservoirs it examines the characteristics and operations of regulatory structures and presents the methods commonly used to assess the environmental health or integrity of these water bodies It also introduces considerations for restoration and presents two unique aquatic environments wetlands and reservoir tailwaters Written from an engineering perspective the book is an ideal introduction to the aquatic and limnological sciences for students of environmental science as well as students of environmental engineering It also serves as a reference for engineers and scientists involved in the management regulation or restoration of freshwater environments **Annual**
