understanding of the ecology of a fish pond is essential for the achievement of steady and high fish production in ponds For the ecologist the fish pond is a small laboratory easy to investigate and responding rapidly to manipulation For the aquaculturist the ecology shows the ways and means of interventions ensuring an increase of production The book deals with the different aspects of natural production within a pond referring it to African conditions considering first the role of soil as source and sink of nutrients for the water then nutrient cycling within water and the fate of fertilizers added to ponds and finally the contribution of natural productivity to fish production The important sum of information brought together in this volume is valuable for both aquaculturist and ecologist who lack a handbook on the ecology of a fish pond It will capture the interest of African aquaculturists and stimulate aquaculture research on natural production *Aquatic Ecosystems and Development* Fritz Schiemer, Barbara Tokarska-Guzik, 2008 Contributed volume of key presentations from a series of biennial International Conferences on the Ecology and Management of Alien Plant Invasions EMAPi This volume aims to contribute to this growing field exploring human perceptions of plant invasions and the role of humans in the invasion process from different perspectives and geographical areas It also covers case studies of the biology and ecology of invasive species mechanisms of invasion and ecological impacts while offering solutions through a variety of control and management techniques

Lowe-McConnell, 2012-12-06 The complexity of ecosystems forms perhaps the greatest challenge for natural science Even the first step to comprehensive analysis namely a survey of the participating species often forms a major obstacle This makes it understandable that ecologists try to abstract general principles from the interrelationships of the multitude of species for use in their efforts to investigate ecosystem dynamics Such unifying concepts were the main theme of the First International Congress of Ecology organized in The Hague in September 1974 by the International Association of Ecology INTECOL under the auspices of the Division of Environmental Biology of the International Union of Biological Sciences IUBS This book contains the papers presented at the plenary sessions of the Congress and a summary of the discussions engendered by them At the Congress over 800 ecologists from many countries representing diverse disciplines such as limnology botany zoology microbiology agriculture met

together for a week The study of ecosystem dynamics depends on mutual understanding and close cooperation and to stimulate an integrated approach a number of main speakers were invited to contribute papers on notions such as energy flow productivity diversity stability and maturity from different points of view These invited papers were presented at the morning plenary sessions followed by discussions

Remote Sensing of Aquatic Coastal Ecosystem Processes Laurie L. Richardson, Ellsworth F. LeDrew, 2006-06-11 The aquatic coastal zone is one of the most challenging targets for environmental remote sensing Properties such as bottom reflectance spectrally diverse suspended sediments and phytoplankton communities diverse benthic communities and transient events that affect surface reflectance coastal blooms runoff etc all combine to produce an optical complexity not seen in terrestrial or open ocean systems Despite this complexity remote sensing is proving to be an invaluable tool for Case 2 waters This book presents recent advances in coastal remote sensing with an emphasis on applied science and management Case studies of the operational use of remote sensing in ecosystem studies monitoring and interfacing remote sensing science management are presented Spectral signatures of phytoplankton and suspended sediments are discussed in detail with accompanying discussion of why blue water Case 1 algorithms cannot be applied to Case 2 waters Audience This book is targeted for scientists and managers interested in using remote sensing in the study or management of aquatic coastal environments With only limited discussion of optics and theory presented in the book such researchers might benefit from the detailed presentations of aquatic spectral signatures and to operational management issues While not specifically written for remote sensing scientists it will prove to be a useful reference for this community for the current status of aquatic coastal remote sensing
