This unique compendium contains a vast systematized data of 14 000 experiments on high velocity penetration into metals, concrete, reinforced concrete and geological media which were published in the open literature, journal papers, reports, conference proceedings during the last 70 years. Data presented in this edition are related to the initial and final stages of penetration and include parameters which characterize mechanical and geometric properties of the striker and the shield, striking and residual velocities of projectile or depth of penetration, changes of mass and size of projectile, angles that determine the initial and residual position of the projectile, ballistic limit velocity, basic characteristics of plug and deformation of the shield. Unified form of data representation and common notations are used throughout the book. All information is presented in numerical form in SI units. The book also contains indices which allow a fast search of the authors' publications and related experiments. Theoreticians, design engineers and experimentalists will find this handbook a valuable reference material.

Response of Structures Under Extreme Loading Venkatesh K.R. Kodur, Nemkumar Banthia, 2015-07-01. Original research on performance of materials under a wide variety of blasts, impacts, severe loading and fire. Critical information for protecting buildings and civil infrastructure against human attack, deterioration and natural disasters. Test and design data for new types of concrete, steel and FRP materials. This technical book is devoted to the empirical and theoretical analysis of how structures and the materials constituting them perform under the extreme conditions of explosions, fire and impact. Each of the 119 fully refereed presentations is published here for the first time and was selected because of its original contribution to the science and engineering of how materials, bridges, buildings, tunnels and their components such as beams and pre-stressed parts respond to potentially destructive forces. Emphasis is placed on translating empirical data to design recommendations for strengthening structures including

strategies for fire and earthquake protection as well as blast mitigation Technical details are provided on the development and behavior of new resistant materials including reinforcements especially for concrete steel and their composites
