

Label the Digestive System #1

Human Anatomy

Read the definitions below, then label the digestive system anatomy diagram.

anus - the opening at the end of the digestive system from which feces exit the body.

appendix - a small sac located near the start of the large intestine.

esophagus - the long tube between the mouth and the stomach. It uses rhythmic muscle movements (called peristalsis) to force food from the throat into the stomach.

gall bladder - a small, sac-like organ located by the duodenum. It stores and releases bile (a digestive chemical which is produced in the liver) into the small intestine.

large intestine - the long, wide tube that food goes through after it goes through the small intestine.

liver - a large organ located above and in front of the stomach. It filters toxins from the blood, and makes bile (which breaks down fats) and some blood proteins.

mouth - the first part of the digestive system, where food enters the body. Chewing and salivary enzymes in the mouth are the beginning of the digestive process (breaking down the food).

pancreas - an enzyme-producing gland located below the stomach and above the intestines. Enzymes from the pancreas help in the digestion of carbohydrates, fats and proteins in the small intestine.

rectum - the lower part of the large intestine, where feces are stored before they are excreted from the body.

small intestine - the long, thin winding tube that food goes through after it leaves the stomach.

stomach - a sack-like, muscular organ that is attached to the esophagus. When food enters the stomach, it is churned in an acid bath.

Stress Response Mechanisms of Bacterial Pathogens Jyl S. Matson, Tracy Raivio, 2020-05-21 A critical factor for bacterial survival in any environment is the ability to sense and respond appropriately to insults that cause stress to the cell threatening its survival Most of these stressors first affect the outer surface of the bacterial cell are sensed in some way and defense measures are enacted in response If the bacteria successfully respond to an encountered stress they survive and multiply If they are unsuccessful or inefficient in their response it can result in death

Efficiently responding to factors that induce stress is especially important for bacteria that inhabit environments that are constantly changing or for those that inhabit more than one biological niche. In addition, bacterial species that associate with humans and other organisms must be able to overcome stresses that are produced by the host immune response in order to colonize and cause disease. The wide variety of stressors encountered by bacteria has resulted in countless strategies that are used by pathogens to overcome these insults, which we continue to identify. Clearly, a better understanding of these stress response mechanisms may be useful for developing new strategies to combat bacteria that cause certain infectious diseases. This Research Topic aims to highlight our increasing understanding of mechanisms by which bacteria sense and respond to stresses encountered in the host or other environments. Examples of stress response mechanisms of interest include but are not limited to those that respond to antimicrobials, host immune responses, or environmental changes. **Multimodality,**

Learning and Communication Jeff Bezemer, Gunther Kress, 2015-11-19. This state-of-the-art account of research and theorizing brings together multimodality, learning, and communication through detailed analyses of signmakers and their meaning-making in museums, hospitals, schools, and the home environment. By analyzing video recordings, photographs, screenshots, and print materials, Jeff Bezemer and Gunther Kress go well beyond the comfortable domains of traditional sites of social semiotic and multimodal research. They steer away from spurious invention and naming of ever more new and exciting domains, focusing instead on fundamentals in assembling a set of tools for current tasks, namely describing and analyzing learning and communication in the contemporary world as one integrated field. The theory outlined in the book is grounded in the findings of the authors' wide-ranging empirical investigations. Each chapter evaluates the work that is being done and has been done, challenging accepted wisdom and standing much of it on its head. With extensive illustrations and many examples presented to show the reach and applicability of the theory, this book is essential reading for all those working in multimodality, semiotics, applied linguistics, and related areas. Lang, 2015-09-01. This is the chapter slice The Circulatory System: Blood from the full lesson plan Circulatory Digestive Reproductive Systems. How can you tell the difference between an artery and a vein? Our resource tells you how. Learn the major organs of four body systems and how they work to keep us alive and healthy. We begin with blood, blood vessels, and the heart. Next, we follow the path food takes from the mouth to the large intestine and find out how food is turned into fuel. Then it's on to how the liver, lungs, and skin all help rid our body of toxins. We look inside the kidneys and intestines and finish with how a tiny sperm and egg cell can grow into a baby. Reading passages, student activities, test prep, and color mini-posters are all included. All of our content is aligned to your State Standards and is written to Bloom's Taxonomy and STEM initiatives.
