3. (a) : Urethra is the urinary duct which originates from the neck of urinary bladder and opens to the exterior at the tip of penis in males. It is a common pathway for passage of urine and semen.

4. (d) : Interstitial cells or Leydig's cells are the cells interspersed between the seminiferous tubules of the testis. They secrete androgens (e.g., testosterone) in response to stimulation by luteinising hormone from the anterior pituitary gland.

Human Reproduction

5. (a) : The male sex accessory ducts include rete testis, vasa efferentia, epididymis and vas deferens. The seminiferous tubules of the testis open into the vasa efferentia through rete testis. The vasa efferentia leave the testis and open into epididymis located along the posterior surface of each testis. So, if vasa efferentia gets blocked, the gametes will not be transported from testes to epididymis.

6. (a) : The testes are situated outside the abdominal cavity within a pouch called scrotum. The scrotum helps in maintaining the low temperature of the testes (2–2.5°C lower than the normal internal body temperature) necessary for spermatogenesis.

7. (c) : Sertoli cells (named after Italian histologist Enrico Sertoli) are found in the walls of the seminiferous tubules of the testis. Compared with the germ cells they appear large and pale. They anchor and probably nourish the developing germ cells, especially the spermatids, which become partly embedded within them.

8. (b) : The seminiferous tubules are closed at one end but on the other side they join to a network the rete testis

The uterus is single and it is also called womb, open into vagina through a narrow cervix. So, III is infundibulum, IV is fimbriae and V is cervix.

17. (b) : Each fallopian tube is about 10–12 cm long and extends from the periphery of each ovary to the uterus, the part closer to the ovary is the funnel-shaped infundibulum. The edges of the infundibulum possess finger-like projections called fimbriae, which help in collection of the ovum after ovulation. The infundibulum leads to a wider part of the oviduct called ampulla. The last part of the oviduct, isthmus has a narrow lumen and it joins the uterus.

18. (c) : Bartholin's glands are situated on either side of vagina in human females. These glands secrete a fluid that lubricates the vulva during copulation.

Scientific and Medical Aspects of Human Reproductive Cloning National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, 2002-06-17 Human reproductive cloning is an assisted reproductive technology that would be carried out with the goal of creating a newborn genetically identical to another human being. It is currently the subject of much debate around the world involving a variety of ethical, religious, societal, scientific, and medical issues. **Scientific and Medical Aspects of Human Reproductive Cloning** considers the scientific and medical sides of this issue plus ethical issues that pertain to human subjects research. Based on experience with reproductive cloning in animals, the report concludes that human reproductive cloning would be dangerous for the woman, fetus, and newborn and is likely to fail. The study panel did not address the issue of whether human reproductive cloning, even if it were found to be medically safe, would be or would not be acceptable to individuals or society.

Reproductive Endocrinology and Biology Edward Bittar,1998-07-27 We have now reached the mid point of our editorial task of putting together the compendium Principles of Medical Biology which is supposed to be composed of twenty five modules The present single volume module on reproductive endocrinology and biology is in more than one respect a continuation of Module 10 in two volumes dealing with molecular and cellular endocrinology In addition it intersects as it should with various parts of obstetrics and gynaecology both of which

are abetted by technology One has only to recall that the practical benefits of ultrasound in perinatal medicine and in vitro fertilisation are the outcome of the technological revolution in biomedicine Whether we are approaching a new era in reproductive biology following the invention of animal cloning is still hard to tell For some people it remains an article of faith that cloning of the human being is highly probable For others asexual reproduction is anathema It should surely be obvious to us all that somatic cell nuclear transfer technology SCNT is going to be at its strongest in dealing with husbandry Whether this and several social forces will alter our modern outlook there can be little doubt As in diverse clinical and basic research so in obstetrics animals are used as a model The data thus obtained is extrapolated if valid to the mother and foetus The success of this approach is exemplified in studies carried out on sheep as a model On the whole it is also quite apparent that progress in the field of reproductive biology is to a large extent ascribable to the discovery in other disciplines of new hormones as well as the introduction of new tools and recent improvements in laboratory methods including measurement of hormones

demographic ramifications of fertility and is a very valuable contribution to the European debate on fertility The very low fertility levels in several EU Member States are a matter of public concern An increase in fertility will not by itself stop demographic ageing but can contribute to decelerating current demographic trends It is therefore essential to understand better the reasons behind Europe's low fertility rates The difficulty of reconciling private life with a professional career far too often compel women to postpone having a family or to have fewer children than they would desire It follows that more and more couples reach an age where fertility problems become prevalent Involuntary infertility is a serious medical condition with strong negative consequences on the wellbeing of the couples concerned and has a negative impact on demographic trends *Anthony's Textbook of Anatomy & Physiology - E-Book* Kevin T.
