Spatial Simulation David O'Sullivan, George L. W. Perry, 2013-09-10 A ground up approach to explaining dynamic spatial modelling for an interdisciplinary audience Across broad areas of the environmental and social sciences simulation models are an important way to study systems inaccessible to scientific experimental and observational methods and also an essential complement to those more conventional approaches The contemporary research literature is teeming with abstract simulation models whose presentation is mathematically demanding and requires a high level of knowledge of quantitative and computational methods and approaches Furthermore simulation models designed to represent specific systems and phenomena are often complicated and as a result difficult to reconstruct from their descriptions in the literature This book aims to provide a practical and accessible account of dynamic spatial modelling while also equipping readers with a sound conceptual foundation in the subject and a useful introduction to the wide ranging literature Spatial Simulation Exploring Pattern and Process is organised around the idea that a small number of spatial processes underlie the wide variety of dynamic spatial models Its central focus

on three building blocks of dynamic spatial models forces of attraction and segregation individual mobile entities and processes of spread guides the reader to an understanding of the basis of many of the complicated models found in the research literature The three building block models are presented in their simplest form and are progressively elaborated and related to real world process that can be represented using them Introductory chapters cover essential background topics particularly the relationships between pattern process and spatiotemporal scale Additional chapters consider how time and space can be represented in more complicated models and methods for the analysis and evaluation of models Finally the three building block models are woven together in a more elaborate example to show how a complicated model can be assembled from relatively simple components To aid understanding more than 50 specific models described in the book are available online at patternandprocess.org for exploration in the freely available Netlogo platform This book encourages readers to develop intuition for the abstract types of model that are likely to be appropriate for application in any specific context Spatial Simulation Exploring Pattern and Process will be of interest to undergraduate and graduate students taking courses in environmental social ecological and geographical disciplines Researchers and professionals who require a non specialist introduction will also find this book an invaluable guide to dynamic spatial simulation

Human Frontiers Michael Bhaskar, 2021-09-02 A fascinating book Bhaskar is a reassuringly positive and often witty guide Observer A fascinating must read book covering a vast array of topics from the arts to the sciences technology to policy This is a brilliant and thought provoking response to one of the most critical questions of our age how we will come up with the next generation of innovation and truly fresh ideas Mustafa Suleyman cofounder of DeepMind and Google VP Have big ideas and big social and economic changes disappeared from the scene Michael Bhaskar's *Human Frontiers* is the best look at these all important questions Tyler Cowen author of *The Great Stagnation* and *The Complacent Class* Michael Bhaskar explores the disturbing possibility that a complacent cautious civilization has lost ambition and is slowly sinking into technological stagnation rather than accelerating into a magical future He is calling for bold adventurous innovators to go big again A fascinating book Matt Ridley author of *How Innovation Works* Where next for humanity Is our future one of endless improvement in all areas of life from technology and travel to medicine movies and music Or are our best years behind us It's easy to assume that the story of modern society is one of consistent radical progress but this is no longer true more academics are researching than ever before but their work leads to fewer breakthroughs innovation is incremental limited to the digital sphere the much vaunted cure for cancer remains elusive space travel has stalled since the heady era of the moonshot politics is stuck in a rut and the creative industries seem trapped in an ongoing cycle of rehashing genres and classics The most ambitious ideas now struggle Our great great great grandparents saw a series of transformative ideas revolutionise almost everything in just a few decades Today in contrast short termism risk aversion and fractious decision making leaves the landscape timid and unimaginative In *Human Frontiers* Michael Bhaskar draws a vividly entertaining and expansive portrait of humanity's relationship with big

ideas He argues that stasis at the frontier is the result of having already pushed so far taken easy wins and started to hit limits But new thinking is still possible By adopting bold global approaches deploying cutting edge technology like AI and embracing a culture of change we can push through and expand afresh Perfect for anyone who has wondered why we haven't gone further this book shows in fascinating detail how the 21st century could stall or be the most revolutionary time in human history
