

CONTINUOUS REINFORCEMENT

Continuous reinforcement is a behavior reinforcement schedule where the target behavior is rewarded every time it occurs.

EXAMPLES

- **Gold Stars for Correct Spelling:** When checking the spelling tests of students, the teacher puts a gold star sticker next to each word spelled correctly.
- **Sales Commissions:** A company gives a small commission to the salesperson for each sale they make.
- **Online Phonics Game:** Every time the player chooses the correct option, a bright colored bell appears and jingles a few seconds.

PARTIAL VS CONTINUOUS

Partial Reinforcement

A reinforcement schedule where a response is only reinforced some of the time, rather than every time it occurs.

Continuous Reinforcement

A reinforcement schedule where a response is reinforced every time it occurs.

Link, 2020-03-09 Two experimental procedures prompted the empirical development of psychophysical models those that measure response frequency often referred to as response probability and those that measure response time sometimes referred to as reaction time The history of psychophysics is filled with theories that predict one or the other of these two responses Yet the persistent reappearance of empirical relationships between these two measures of performance makes clear the need for a theory that both predicts and relates these two measures Most likely both response measures are the result of a single process that generates empirical laws relating response time and response probability It is this process its theory description and application that is the topic of *The Wave Theory of Difference and Similarity* Originally published in 1992 the author of this book has set out to provide a theoretical foundation for formulating new theories that systematize earlier results and to stimulate new concepts and introduce new tools for exploring mental phenomena and improving mental measurement
