Team Dynamics was a revolutionary book in the field of trauma care. It was the first text that integrated the complexities of trauma care but illustrated how these could be streamlined and improved through a team-based focus and training. CRM and team-based training has grown substantially in the past six years since this text was conceived and there have been significant developments both in the breadth of the training as well as refinement in the topics covered, teaching methods utilized, and strategies employed to overcome the multitude of challenges still faced in this area. The second edition of this text expands greatly on the initial CRM topics covered in the opening section of the book. Hot topics in CRM training including the concepts of followership and conflict resolution and highlights strategies such as mindfulness and others to manage stress and reduce burnout are discussed. The text also expands into novel areas of trauma care including less invasive bedside endovascular treatments such as REBOA (Resuscitative Endovascular Balloon Occlusion of the Aorta) and a more in-depth discussion of teleresuscitation and trauma care in austere environments. Featuring 28 new chapters, the second edition of *Trauma Team Dynamics* is written by experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and includes NASA and United States military-affiliated experts. It is intended for use as both a day-to-day clinical resource and a reference text and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.
