Handbook of Anatomical Models for Radiation Dosimetry Xie George Xu, Keith F. Eckerman, 2009-09-01 Over the past few decades the radiological science community has developed and applied numerous models of the human body for radiation protection diagnostic imaging and nuclear medicine therapy The Handbook of Anatomical Models for Radiation Dosimetry provides a comprehensive review of the development and application of these computational models The Reviewer's Guide to Quantitative Methods in the Social Sciences Gregory R. Hancock, Ralph O. Mueller, Laura M. Stapleton, 2010-04-26 Designed for reviewers of research manuscripts and proposals in the social and behavioral sciences and beyond this title includes chapters that address traditional and emerging quantitative methods of data analysis Groundwater Resources Modelling M. G. Shepley, 2012 The UK is a country with over 150 years of widespread exploitation of its principal aquifers for public water supply Increasing demands greater awareness of environmental pressures and more exacting legislation has heightened the need for quantitative models to predict the impacts of groundwater use In the UK this has culminated in a unique national regulator led programme for England and Wales to develop conceptual and numerical models of the principal bedrock aquifers The outcomes of this programme will be of interest to the international hydrogeological community particularly as international legislation such as the European Water Framework Directive requires management of water issues across administrative boundaries with a varied cast of stakeholders The collection of papers provides a contrast between practitioner and research based approaches to assess and predict the anthropogenic impacts and environmental pressures **Proton Therapy Physics** Harald Paganetti, 2016-04-19 Proton Therapy Physics goes beyond current books on proton therapy to provide an in depth overview of the physics aspects of this radiation therapy modality eliminating the need to dig through information scattered in the medical physics literature After tracing the history of proton therapy the book summarizes the atomic and nuclear physics background necessary for understanding proton interactions with tissue It describes the physics of proton accelerators the parameters of clinical proton beams and the mechanisms to generate a conformal dose distribution in a patient The text then covers detector systems and measuring techniques for reference dosimetry outlines basic quality assurance and commissioning guidelines and gives examples of Monte Carlo simulations in proton therapy The book moves on to discussions of treatment planning for single and multiple field uniform doses dose calculation concepts and algorithms and precision and uncertainties for nonmoving and moving targets It also examines computerized treatment plan optimization methods for in vivo dose or beam range verification the safety of patients and operating personnel and the biological implications of using protons from a physics perspective The final chapter illustrates the use of risk models for common tissue complications in treatment optimization Along with exploring quality assurance issues and biological considerations this practical guide collects the latest clinical studies on the use of protons in treatment planning and radiation monitoring Suitable for both newcomers in medical physics and more seasoned specialists in radiation

oncology the book helps readers understand the uncertainties and limitations of precisely shaped dose distribution

Nuclear Fusion Programme: Annual Report of the Association Karlsruhe Institute of Technology/EURATOM ; January 2013 - December 2013 Pleli, Ingrid,2015-03-18 **Approaches and Applications of Inductive Programming**

Ute Schmid,Emanuel Kitzelmann,2010-04-14 This book constitutes revised papers of the Third International Workshop on approaches and Applications of Inductive Programming AAIP 2009 held in Edinburgh UK in September 2009 The 7 full papers included in this volume were carefully reviewed and selected The book also contains two invited papers Annual Report 2013 / Institute for Nuclear Waste Disposal Geckeis, H.,Altmaier, M.,Fanghaenel, S.,2013-11-25 **Credit**

Engineering for Bankers Morton Glantz,Johnathan Mun,2010-11-25 More efficient credit portfolio engineering can increase the decision making power of bankers and boost the market value of their banks By implementing robust risk management procedures bankers can develop comprehensive views of obligors by integrating fundamental and market data into a portfolio framework that treats all instruments similarly Banks that can implement strategies for uncovering credit risk investments with the highest return per unit of risk can confidently build their businesses Through chapters on fundamental analysis and credit administration authors Morton Glantz and Johnathan Mun teach readers how to improve their credit skills and develop logical decision making processes As readers acquire new abilities to calculate risks and evaluate portfolios they learn how credit risk strategies and policies can affect and be affected by credit ratings and global exposure tracking systems The result is a book that facilitates the discipline of market oriented portfolio management in the face of unending changes in the financial industry Concentrates on the practical implementation of credit engineering strategies and tools Demonstrates how bankers can use portfolio analytics to increase their insights about different groups of obligors Investigates ways to improve a portfolio s return on risk while minimizing probability of insolvency *The Oxford Handbook of Applied Bayesian Analysis* Anthony O' Hagan,Mike West,2010-03-18 Bayesian Statistics is a dynamic and fast growing area of statistical research with wide ranging and far reaching applications across science technology commerce and industry This Handbook explores contemporary Bayesian analysis across a variety of techniques and application areas Rock Engineering in Difficult Ground Conditions - Soft Rocks and Karst Ivan Vrkljan,2009-10-14 Containing 129 papers in geological and hydrogeological properties of karst regions rock properties testing methods and site characterization design methods and analyses monitoring and back analysis excavation and support environmental aspects of geotechnical engineering in karst regions and case histories this volume is of interest to professionals engineers and academics involved in rock mechanics and rock engineering *Handbook of Erosion Modelling* R. P. C. Morgan,Mark Nearing,2016-04-13 The movement of sediment and associated pollutants over the landscape and into water bodies is of increasing concern with respect to pollution control prevention of muddy floods and environmental protection In addition the loss of soil on site has implications for declining agricultural productivity loss of biodiversity and decreased amenity and landscape value The fate of sediment and the

conservation of soil are important issues for land managers and decision makers In developing appropriate policies and solutions managers and researchers are making greater use of erosion models to characterise the processes of erosion and their interaction with the landscape A study of erosion requires one to think in terms of microseconds to understand the mechanics of impact of a single raindrop on a soil surface while landscapes form over periods of thousands of years These processes operate on scales of millimetres for single raindrops to mega metres for continents Erosion modelling thus covers quite a lot of ground This book introduces the conceptual and mathematical frameworks used to formulate models of soil erosion and uses case studies to show how models are applied to a variety of purposes at a range of spatial and temporal scales The aim is to provide land managers and others with the tools required to select a model appropriate to the type and scale of erosion problem to show what users can expect in terms of accuracy of model predictions and to provide an appreciation of both the advantages and limitations of models Problems covered include those arising from agriculture the construction industry pollution and climatic change and range in scale from farms to small and large catchments The book will also be useful to students and research scientists as an up to date review of the state of art of erosion modelling and through a knowledge of how models are used in practice in highlighting the gaps in knowledge that need to be filled in order to develop even better models

Kannan Krishnan, Melvin E. Andersen, 2010-04-01 Governments around the world are passing laws requiring industry to assess the toxicity of the chemicals and products they produce but to do so while reducing refining or even replacing testing on animals To meet these requirements experimental toxicologists and risk assessors are adopting quantitative approaches and computer simulations to study the biological fate and effects of chemicals and drugs In *Quantitative Modeling in Toxicology* leading experts outline the current state of knowledge on the modeling of dose tissue interactions and tissue responses Each chapter describes the mathematical foundation parameter estimation challenges and perspectives for development along with the presentation of a modeling template Additionally tools and approaches for conducting uncertainty sensitivity and variability analyses in these models are described Topics covered include the quantitative models of pharmacokinetics of individual chemicals and mixtures models for toxicant target tissue interaction models for cellular organ and organism responses approaches tools and challenges for model application and evaluation A website containing computer codes accompanies the book to help the reader reconstruct the models described and discussed in the various chapters *Quantitative Modeling in Toxicology* serves as an essential reference source and tool box for risk assessors and researchers and students in toxicology public health pharmacology and human toxicology interested in developing quantitative models for a better understanding of dose response relationships
