New Mechanism João L. Cordovil, Gil Santos, Davide Vecchi, 2023-12-12 This open access book addresses the epistemological and ontological significance as well as the scope of new mechanism. In particular, this book addresses the issues of what is new about new mechanism, the epistemological and ontological reasons underlying the adoption of mechanistic instead of other modelling strategies as well as the possibility of mechanistic explanation to accommodate a non-trivial notion of emergence. Arguably, new mechanism has been particularly successful in making sense of scientific practice in the molecular life sciences. But what about other sciences? This book enlarges the context of analysis, addressing the issue of the putative compatibility between the current ways of conceiving new mechanism and actual scientific practices in quantum physics, chemistry, biochemistry, developmental biology and the cognitive sciences.

Measuring the Evolution Controversy Avelina Espinosa, Guillermo Paz-y-Miño-C, 2016-05-11 The reality of evolution is indisputable and based on current scientific evidence, all people in the world should accept it as fact. Yet only 41% of adults worldwide embrace evolution, and they do it under the premise that a deity created humans. One in every three people is a strict creationist who believes in religious scriptures concerning the origin of our universe and of humans and explicitly rejects that *Homo sapiens* is an ape when in fact science informs us that humans' closest relatives are chimpanzees, bonobos, gorillas, and orangutans. Indeed, we are all apes. Why do people not accept evolution? In *Measuring the Evolution Controversy*, Guillermo Paz y Miño-C and Avelina Espinosa postulate that the debate over evolution and science versus creationism is inherent in the incompatibility between scientific rationalism, empiricism, and the belief in supernatural causation, religion, and faith. Belief disrupts, distorts, delays, or stops the comprehension and acceptance of scientific evidence. The authors refer to this proposal as the incompatibility hypothesis (IH). The conceptual foundation of this book: Paz y Miño-C and Espinosa explain that the evolution controversy is not only measurable descriptively but also testable as in an ordinary field of science. To accomplish this, they examine three predictions of IH: First, chronological conflict and accommodation, i.e., the historical re-emergence of antagonism between evolution and religion when advances in science continue to threaten the belief in supernatural causation; in such situations, creationists' rejection of and subsequent partial acceptance of the new scientific discoveries are expected. Second, change in evolution's acceptance as a function of educational attainment, i.e., the positive association between acceptance of evolution and level of education. Third, change in evolution's acceptance as a function of religiosity, i.e., the negative association between acceptance of evolution and level of religious beliefs. By relying on an ample assessment of the attitudes towards evolution by highly educated audiences, i.e., research faculty, educators of prospective teachers, and college students in the United States, the authors characterise their understanding of science and evolution, personal religious convictions, and political ideology. The authors make recommendations for improving science and evolution literacy as well as evolution's acceptance and conclude by forecasting a probable global socio-cultural landscape in which

acceptance of science and evolution will take place *Ecological Reparation* Dimitris Papadopoulos, Maria Puig de la Bellacasa, Maddalena Tacchetti, 2023-12 How do we engage with the threat of social and environmental degradation while creating and maintaining liveable and just worlds Researchers from diverse backgrounds unpack this question through a series of original and committed contributions to this wide ranging volume The authors explore practices of repairing damaged ecologies across different locations and geographies and offer innovative insights for the conservation mending care and empowerment of human and nonhuman ecologies This ground breaking collection establishes ecological reparation as an urgent and essential topic of public and scholarly debate **The Research Probe** Sharleen M.
