Alford,Suzanne Ferriss,2016-04-06 An Alternative History of Bicycles and Motorcycles Two Wheeled Transportation and Material Culture accounts for the nineteenth century creation and development of two wheeled vehicles both human powered and motorized Specifically the book focuses on the period from 1885 which saw the appearance simultaneously of the Safety bicycle and the Einspur the first motorcycle to 1920 while exploring implications for later bicycling and motorcycling We argue that invention of these vehicles rather than the product of gifted individuals should be seen as the consequence of a number of historical economic cultural and political forces that intersect so unpredictably that the notion of a genius inventor is reductive The common evolutionary model of development from the bicycle to the motorcycle oversimplifies both the technology and its origins Stripping the vehicles of all their material and cultural associations such a model fails to advance our understanding of the devices their creators and their riders Taking a contemporary vehicle and tracing its lineage creates a false sense of evolutionary necessity in its creation and fails to account for the many possible developmental paths that were for whatever reason abandoned By contrast our book adopts a material culture approach a form of inquiry that stresses the connections between artifacts and social relations We consider not simply the bicycle and motorcycle as material objects but focus also on the complex socio political and economic convergences that produced the materials materials that in turn themselves shaped the vehicles appearance function and adoption by riders *AUTO-ONLINE* 10/2013 136 1000000000,2013-09-26 Toyota New Altis VW Golf GTI Peugeot 208 GTi *Sigma Receptors* Stephen T. Barth,D.E. Carpenter,A.H. Soloway,2012-12-06 Binary systems for the treatment of cancer potentially are among the most attractive of the new therapeutic modalities that currently are under investigation The basic concept is to selectively destroy malignant cells while concomitantly sparing normal tissue Neutron capture therapy NCT is the binary system that has been the subject of the Fifth International Symposium on Neutron Capture Therapy which was held

September 13-17 1992 in Columbus Ohio under the auspices of the International Society for Neutron Capture Therapy Its objective was to bring together researchers from throughout the world and to provide a forum at which they could present the latest advances in the development of Neutron capture therapy Neutron capture therapy has largely but not exclusively focused on the use of boron 10 as the target nuclide Boron neutron capture therapy BNCT is based on the nuclear reaction that occurs when the stable isotope boron 10 absorbs low energy non ionizing thermal neutrons to yield alpha particles and recoiling lithium 7 nuclei The size and energy of these high linear energy transfer LET particles result in their being confined largely to the cells in which the capture reaction occurs For BNCT to be successful a sufficient number of ^{10}B atoms must be localized within neoplastic cells and enough thermal neutrons must be delivered and absorbed by the ^{10}B to produce a lethal $^{10}\text{B}(n,\alpha)^7\text{Li}$ reaction Two major problems must be surmounted
