Land Use Nature Conservation And The Stability Of Rainforest Margins In Southeast Asia:

Land Use, Nature Conservation and the Stability of Rainforest Margins in Southeast Asia Gerhard

Gerold, Michael Fremerey, Edi Guhardja, 2013-06-29 Southeast Asia constitutes one of the world's most extended rainforest regions. It is characterized by a high degree of biodiversity and contains a large variety of endemic species. Moreover, these forests provide a number of important and singular ecosystem services like erosion protection and provision of high quality water which cannot be replaced by alternative ecosystems. However, various forms of encroachment, mostly those made by human interventions, seriously threaten the continuance of rainforests in this area. There is ample evidence that the rainforest resources, apart from large-scale commercial logging, are exposed to danger, particularly from its margin areas. These areas, which are characterized by intensive man-nature interaction, have been identified as extremely fragile systems. The dynamic equilibrium that balances human needs and interventions on the one hand and natural regeneration capacity on the other is at stake. The decrease of rainforest resources is to a substantial degree connected with the destabilization of these systems. Accordingly, the search for measures and processes which prevent destabilization and promote stability is regarded as imperative. This refers to both the human and the natural part of the forest margin ecosystem. Stability of Tropical

Rainforest Margins Teja Tscharntke, Christoph Leuschner, Manfred Zeller, Edi Guhardja, Arifuddin Bidin, 2007-04-26 Tropical rainforests are disappearing at an alarming rate, causing unprecedented losses in biodiversity and ecosystem services. This book contributes to an improved understanding of the processes that have destabilizing effects on ecological and socio-economic systems of tropical rain forest margins, as well as striving to integrate environmental, technological, and socio-economic issues in their solution. **Sustainable Land Use and Rural Development in Southeast Asia: Innovations**

and Policies for Mountainous Areas Holger L. Fröhlich, Pepijn Schreinemachers, Karl Stahr, Gerhard Clemens, 2013-04-03 This book is based on the findings of a long-term 2000-2014 interdisciplinary research project of the University of Hohenheim in collaboration with several universities in Thailand and Vietnam. Titled Sustainable Land Use and Rural Development in Mountainous Areas in Southeast Asia or the Uplands Program, the project aims to contribute through agricultural research to the conservation of natural resources and the improvement of living conditions of the rural population in the mountainous regions of Southeast Asia. Having three objectives, the book first aims to give an interdisciplinary account of the drivers, consequences, and challenges of ongoing changes in mountainous areas of Southeast Asia. Second, the book describes how innovation processes can contribute to addressing these challenges, and third, how knowledge creation to support change in policies and institutions can assist in sustainably developing mountain areas and people's livelihoods. **Sustainable Land**

Use in Mountainous Regions of Southeast Asia Franz J. Heidhüs, Ludger Herrmann, Andreas Neef, Sybille Neidhart, Jens Pape, Pittaya Sruamsiri, Dao Chau Thu, Anne Vallé Zarate, 2008-01-08 Mountainous regions are vitally important ecosystems. They are an important storage of fresh water and energy, a rich source of biodiversity, and a significant provider of food for

the people living there They are ecologically highly variable complex and vulnerable and ethnically socio culturally and economically extremely heterogeneous At the same time they are under severe and increasing pressures caused by higher population growth immigration resource exploitation and rising demands and expectations They also account for a major share of poverty and food insecurity in rural areas Given their importance complexity and vulnerability mountainous regions pose a demanding and new challenge for agricultural research particularly for research that is addressing environmental sustainability poverty and food insecurity The University of Hohenheim s long term research program Sustainable Land Use and Rural Development in Mountainous Regions of Southeast Asia Sonderforschungsbereich SFB 564 der Deutschen Forschungsgemeinschaft also known as The Uplands Program is taking on that challenge It is an integrated interdisciplinary research program where sustainable innovations for agricultural production systems combining fruit trees crops livestock and aquacultural production in their interaction with soil water and agrochemical use are analysed as well as their impact on landscape diversity and population dynamics of pests and beneficial insects Further along the value added chain of agricultural production potentials of product conservation processing and marketing are studied

Tropical Rainforests and Agroforests under Global Change Teja Tscharntke, Christoph Leuschner, Edzo Veldkamp, Heiko Faust, Edi Guhardja, Arifuddin Bidin, 2010-02-04 not only for land use systems that depend on the regular supply of rain or irrigation water but also for the future development of natural rainforests as drought stress has been shown to affect tree growth and species composition in old growth forests Wright 1991 Walsh and Newbery 1999 Engelbrecht et al 2007 A drought experiment conducted in a cacao agroforestry plantation showed that this plantation was surprisingly resilient to an induced drought of more than a year Schwendenmann et al 2009 However droughts can have a strong impact on household incomes from agriculture they strongly affect the vulnerability to poverty and thus have to be analyzed as important exogenous shocks to households forcing them to adjust their behaviour and develop strategies to cope with these problems The stability of rainforest margins is a critical factor in the protection of tropical rainforests Tscharntke et al 2007 At present however rainforest margins in many parts of the tropics are far from stable both in socio economic and in ecological terms For example protected areas may attract rather than repel human settlement which may be due to international donor investment in national conservation programs Wittemeyer et al 2008 An alternative hypothesis is that protected areas might be compromised if leakage takes place that is if impacts that would take place inside the restricted area are displaced to a nearby undisturbed area Ewers and Rodrigues 2008

Shifting Cultivation Policies Malcolm Cairns, 2017-11-13 Shifting cultivation supports around 200 million people in the Asia Pacific region alone It is often regarded as a primitive and inefficient form of agriculture that destroys forests causes soil erosion and robs lowland areas of water These misconceptions and their policy implications need to be challenged Swidden farming could support carbon sequestration and conservation of land biodiversity and cultural heritage This comprehensive analysis of past and present policy highlights successes and

failures and emphasizes the importance of getting it right for the future This book is enhanced with supplementary resources The addendum chapters can be found at www.cabi.org/openresources 91797 *Trace Gas Emissions from Forest and Land-use Systems at the Tropical Forest Margins in Central Sulawesi, Indonesia* Joko Purbopuspito,2005 **Development - Organization - Interculturalism.Essays in Honor of Prof. Dr. Michael Fremerey** Constanze Engel,Günter Burkard,Hans Hemann,Werner Troßbach,Peter Wolff,2009 **Land Use and the Carbon Cycle** Daniel G. Hawksworth,Alan T. Bull,2007-04-06 Drawing on research from biodiversity experts around the world this book reflects the diversity of forest types and forest issues that concern forest scientists Coverage ranges from savannah and tropical rainforests to the ancient oak forests of Poland issues explored include the effects of logging management practices forest dynamics and climate change on forest structure and

biodiversity Here is a useful overview of current science for researchers and educators alike **Impact of Smallholders' Access to Land and Credit Markets on Technology Adoption and Land Use Decisions** Nunung Nuryartono, 2005 A *Matter of Mutual Survival* Günter Burkard, Michael Fremerey, 2008 This volume contains a collection of articles based on empirical social science research in forest margin communities around the Lore Lindu National Park in Central Sulawesi Indonesia It refers to a worldwide and particularly topical issue i e the declining forest resources and man's role in the observed processes of nature degradation However it refrains from rather simplistic protectionist approaches which boil down to a separation between man and nature in order to avoid the depletion of natural resources Instead the approach adopted regards the existence or development of co evolutionary potentials both in nature and human society as a precondition for the establishment of a sustainable equilibrium in the interaction between man and nature Intact Forests Yadvinder Malhi, James E. M. Watson, Alexandra C. Morel, Tom Evans, 2021-09-23 Primate Ecology and Conservation Eleanor Sterling, Nora Bynum, Mary Blair, 2013-04-04 The study of primate ecology and conservation has advanced rapidly in recent years This practical volume brings together a group of distinguished primate researchers to synthesize field laboratory and conservation management techniques for primate ecology and conservation The synthesis focuses on new and emerging field methods alongside a comprehensive presentation of laboratory and data analysis techniques as well as the latest methods for determining conservation status and conservation management This book's particular focus is on innovative ways to study primates in a changing world including emerging methods such as non invasive genetic techniques and advanced spatial modeling In addition to synthesizing field and lab methods the authors also discuss data interpretation as well as important guiding questions and principles for students and researchers to consider as they plan research projects in primate ecology and conservation such as how to choose a field site acquire research permits connect with local authorities communities and researchers and many other considerations Although three chapters are dedicated to conservation methods consideration of conservation status and threats to primate populations are considered throughout this volume where appropriate This latest publication in the Techniques in Ecology and Conservation Series aims to provide a practical empirical reference text with an international scope appropriate for graduate students researchers and conservation professionals across the globe *Indonesian Primates* Sharon Gursky-Doyen, Jatna Supriatna, 2010-01-15 Indonesia possesses the second largest primate population in the world with over 33 different primate species Although Brazil possesses more primate species Indonesia outranks it in terms of its diversity of primates ranging from prosimians slow lorises and tarsiers to a multitude of Old World Monkey species macaques langurs proboscis monkeys to lesser apes siamangs gibbons and great apes orangutans The primates of Indonesia are distributed throughout the archipelago Partly in response to the number of primates distributed throughout the Indonesian archipelago Indonesia is classified as the home of two biodiversity hotspots Wallacea and Sundaland In order to be classified as a hotspot an area must have a large proportion

of endemic species coupled with a high degree of threat including having lost more than 70% of its original habitat Two areas within Indonesia meet these criteria The tremendous diversity of primates in Indonesia in conjunction with the conservation issues facing the primates of this region created a need for this volume **High Altitude Primates** Nanda B. Grow, Sharon Gursky-Doyen, Alicia Krzton, 2013-11-19 The basic goal of the volume is to compile the most up to date research on how high altitude affects the behavior ecology evolution and conservation status of primates especially in comparison to lowland populations Historically the majority of primate studies have focused on lowland populations However as the lowlands have been disappearing more and more primatologists have begun studying populations located in higher altitudes High altitude populations are important not only because of their uniqueness but also because they highlight the range of primate adaptability and the complex variables that are involved in primate evolution These populations are good examples of how geographic scales result in diversification and or speciation Yet there have been very few papers addressing how this high altitude environment affects the behavior ecology and conservation status of these primates
