Audience Graduate students and researchers *Theory and Applications of NeutroAlgebras as Generalizations of Classical Algebras* Smarandache, Florentin,Al-Tahan, Madeline,2022-04-15 Neutrosophy is a new branch of philosophy that studies the origin nature and scope of neutralities as well as their interactions with different ideational spectra In all classical algebraic structures the law of compositions on a given set are well defined but this is a restrictive case because there are situations in science where a law of composition defined on a set may be only partially defined and partially undefined which we call NeutroDefined or totally undefined which we call AntiDefined Theory and Applications of NeutroAlgebras as Generalizations of Classical Algebra introduces NeutroAlgebra an emerging field of research This book provides a comprehensive collection of original work related to NeutroAlgebra and covers topics such as image retrieval mathematical morphology and NeutroAlgebraic structure It is an essential resource for philosophers mathematicians researchers educators and students of higher education and academicians *Soft Computing Applications for Group Decision-making and Consensus Modeling*

Mikael Collan,Janusz Kacprzyk,2017-06-30 This book offers a concise introduction and comprehensive overview of the state of the art in the field of decision making and consensus modeling with a special emphasis on fuzzy methods It consists of a collection of authoritative contributions reporting on the decision making process from different perspectives from psychology to social and political sciences from decision sciences to data mining and from computational sciences in general to artificial and computational intelligence and systems Written as a homage to Mario Fedrizzi for his scholarly achievements creative ideas and long lasting services to different scientific communities it introduces key theoretical concepts describes new models and methods and discusses a range of promising real world applications in the field of decision making science It is a timely reference guide and a source of inspiration for advanced students and researchers **Fuzzy Algebraic**

Hyperstructures Bijan Davvaz,Irina Cristea,2015-01-23 This book is intended as an introduction to fuzzy algebraic hyperstructures As the first in its genre it includes a number of topics most of which reflect the authors past research and thus provides a starting point for future research directions The book is organized in five chapters The first chapter introduces readers to the basic notions of algebraic structures and hyperstructures The second covers fuzzy sets fuzzy groups and fuzzy polygroups The following two chapters are concerned with the theory of fuzzy Hv structures while the third chapter presents the concept of fuzzy Hv subgroup of Hv groups the fourth covers the theory of fuzzy Hv ideals of Hv rings The final chapter discusses several connections between hypergroups and fuzzy sets and includes a study on the association

between hypergroupoids and fuzzy sets endowed with two membership functions In addition to providing a reference guide to researchers the book is also intended as textbook for undergraduate and graduate students *Models and Theories in Social Systems* Cristina Flaut, Šárka Hošková-Mayerová, Daniel Flaut, 2018-10-12 This book concisely presents a broad range of models and theories on social systems Because of the huge spectrum of topics involving social systems various issues related to Mathematics Statistics Teaching Social Science and Economics are discussed In an effort to introduce the subject to a wider audience this volume part of the series Studies in Systems Decision and Control equally addresses the needs of mathematicians statisticians sociologists and philosophers The studies examined here are divided into four parts The first part Perusing the Minds Behind Scientific Discoveries traces the winding path of Syamal K Sen and Ravi P Agarwal s scholarship throughout history and most importantly the thought processes that allowed each of them to master their subject The second part covers Theories in Social Systems and the third discusses Models in Social Systems while the fourth and final part is dedicated to Mathematical Methods in the Social Sciences Given its breadth of coverage the book will offer inquisitive readers a valuable point of departure for exploring these rich vast and ever expanding fields of knowledge
