Methods in Primatology Joanna M. Setchell, Deborah J. Curtis, 2003-09-18 Field and Laboratory Methods in Primatology is a manual for students and researchers studying wild primates Technological advances allow fieldworkers to collect a wide range of data store samples for later analysis and collect information remotely These methods open up opportunities to gain new insights on previously studied populations and are the means of collecting data on species that have until now been difficult to study However information on the practicalities of using such methodology in the field has largely been lacking Here in this indispensable reference experienced fieldworkers provide the first comprehensive guide to the wide variety of techniques available for the study of wild primates Covering everything from pre trip planning to laboratory analysis of endocrine and genetic samples packed full of tips and emphasising practicalities and ethics throughout it is a must have for all field primatologists and others studying free ranging animals **Atmospheric and Oceanic Circulation** Robert V.

Rohli, Anthony J. Vega, Keith G. Henderson, 2024-12-21 This book provides a one stop shop for coastal and marine scientists to understand processes that generate atmospheric circulation as integrated with terrestrial and oceanic circulation processes to create an Earth ocean atmosphere climate system It uses the process approach in the first half of the book to set the stage for understanding circulation systems and then for explaining the circulation processes themselves with the second half of the book dedicated to showing how these processes play themselves out across the Earth s terrestrial and marine surface The processes explained in the first half of the book assume no prior knowledge of meteorology or oceanography The regional section includes the major continents or subcontinents along with their surrounding ocean environs It begins with

the area with which many most readers are likely most familiar the USA and Canada From there the tour of the world continues beginning with the places that have atmospheric and oceanic circulation features that are most similar to the USA and Canada all in the Northern Hemisphere Europe Southwestern Asia and then East Asia From there the discussion builds on principles illustrated in the first half of the book and demonstrated in the beginning of the regional section of the book while also adding concepts and principles of importance in the tropical and subtropical latitudes by describing circulation features of South and Southeast Asia This discussion carries forward naturally for a discussion of Africa which experiences similar features of subtropical and tropical latitudes From there previous material can be applied and built upon further in the discussion of Latin America and the Caribbean Australia and Oceania are the next area covered followed by the polar latitudes The book concludes with a brief review of the major atmospheric and oceanic circulation features around the world and with a reminder of the cascading primary and secondary impacts of the climate system The book is intended to fill a niche as both a textbook and a reference source for non atmospheric specialists Its purpose is to help coastal environmental engineering and planning professionals to get up to speed regarding atmospheric and oceanic circulations and their impacts around the world This would allow more effective communication with climate modelers atmospheric and marine environmental consultants and media Our book writing experience allows us to implement best practices based on cognitive theory to facilitate learning in the geosciences
