Safety, Reliability and Applications of Emerging Intelligent Control Technologies T.S. Ng,Y.S. Hung,2014-06-28 Increasingly over the last few years intelligent controllers have been incorporated into control systems Presently the numbers and types of intelligent controllers that contain variations of fuzzy logic neural network genetic algorithms or some other forms of knowledge based reasoning technology are dramatically rising However considering the stability of the system when such controllers are included it is difficult to analyse and predict system behaviour under unexpected conditions Leading researchers and industrial practitioners were able to discuss and evaluate current development and future research directions at the first IFAC International Workshop on safety reliability and applications on emerging intelligent control technology This publication contains the papers covering a wide range of topics

presented at the workshop *Official Gazette Philippines*,2001 **Limit States of Compressed Concrete Elements by Transverse Deformations** Iakov Iskhakov,Ilya Frolov,Yuri Ribakov,2025-06-27 The theoretical stress strain model for compressed concrete Iskhakov and Ribakov 2018 is based on the structural phenomenon and requires no empirical coefficients It includes such main parameters of concrete behavior as stresses and strains at the border between the elastic and non elastic behavior ultimate elastic strains and stresses and strains at the end of the post peak region Particular attention was focused on the descending branch of the stress strain diagram and on concrete elastic and plastic potentials that are important for dynamic response of concrete element section and for concrete creep The book presents experimental and numerical results confirming this model It deals with experimental verification of theoretical models of cracking and failure scheme for cylindrical specimens The importance of using transverse deformations for analysis of initiation and development of inelastic deformations under high loading rates is verified The experimental and numerical results are in good agreement with the theoretical ones which significantly reduces the number of empirical coefficients in compressed concrete elements design
