Verification and Validation of Complex Systems: Human Factors Issues John A. Wise, V. David Hopkin, Paul Stager, 2013-06-29 Despite its increasing importance the verification and validation of the human machine interface is perhaps the most overlooked aspect of system development Although much has been written about the design and development process very little organized information is available on how to verify and validate highly complex and highly coupled dynamic systems Inability to evaluate such systems adequately may become the limiting factor in our ability to employ systems that our technology and knowledge allow us to design This volume based on a NATO Advanced Science Institute held in 1992 is designed to provide guidance for the verification and validation of all highly complex and coupled systems Air traffic control is used as an example to ensure that the theory is described in terms that will allow its implementation but the results can be applied to all complex and coupled systems The volume presents the knowledge and theory in a format that will allow readers from a wide variety of backgrounds to apply it to the systems for which they are responsible The emphasis is on domains where significant advances have been made in the methods of identifying potential problems and in new testing methods and tools Also emphasized are techniques to identify the assumptions on which a system is built and to spot their weaknesses

Practical Guide to High Performance Engineering Plastics David J Kemmish, 2011-07-30 High performance engineering plastics are used in a vast range of applications and environments They are becoming increasingly important because of trends towards more reliable and higher performance machines and devices This book gives readers a working knowledge and understanding of high performance engineering plastics It starts with a simple practical overview of key properties and principles In each of the chapters there are sections on production chemistry product forms properties processing and applications There is a strong bias towards materials and concepts which are used in practice The materials covered include high performance Polyethersulfones Polyetherimides Polyphthalamides Polyphenylene Sulfide Polyaryletherketones Polyamideimides Polyimides Polybenzimidazole Liquid Crystalline Polyesters and Perfluoropolymers The reader will develop the ability to understand why materials are chosen for certain applications why those materials have particular properties and how those properties can be modified This will facilitate conversations with

both materials suppliers and end users It will help to identify the best and most cost effective solutions

Stability and Control of Conventional and Unconventional Aerospace Vehicle Configurations Bernd Chudoba,2019-07-23 This book introduces a stability and control methodology named AeroMech capable of sizing the primary control effectors of fixed wing subsonic to hypersonic designs of conventional and unconventional configuration layout Control power demands are harmonized with static dynamic and maneuver stability requirements while taking the six degree of freedom trim state into account The stability and control analysis solves the static and dynamic equations of motion combined with non linear vortex lattice aerodynamics for analysis The true complexity of addressing subsonic to hypersonic vehicle stability and control during the conceptual design phase is hidden in the objective to develop a generic vehicle configuration independent methodology concept The inclusion of geometrically asymmetric aircraft layouts in addition to the reasonably well known symmetric aircraft types contributes significantly to the overall technical complexity and level of abstraction The first three chapters describe the preparatory work invested along with the research strategy devised thereby placing strong emphasis on systematic and thorough knowledge utilization The engineering scientific method itself is derived throughout the second half of the book This book offers a unique aerospace vehicle configuration independent generic methodology and mathematical algorithm The approach satisfies the initial technical quest How to develop a configuration stability control methodology module for an advanced multi disciplinary aerospace vehicle design synthesis environment that permits consistent aerospace vehicle design evaluations
