Algal Conditions and the Potential for Future Algal Problems in the Willamette River, Oregon

David A. Rickert, 1977 For nearly half a century the Willamette River in Oregon experienced severe dissolved oxygen problems related to large loads of organically rich waste waters from industries and municipalities Since the mid 1950 s dissolved oxygen quality has gradually improved owing to low flow augmentation the achievement of basinwide secondary treatment and the use of other waste management practices As a result summer dissolved oxygen levels have increased salmon runs have returned and the overall effort is widely regarded as a singular water quality success To document the improved dissolved oxygen regimen the U S Geological Survey conducted intensive studies of the Willamette during the summer low flow seasons of 1973 and 1974 During each summer the mean daily dissolved oxygen levels were found to be higher than 5 milligrams per liter throughout the river Because of the basinwide secondary treatment carbonaceous deoxygenation rates were low In addition almost half of the biochemical oxygen demand entering the Willamette was from diffuse nonpoint sources rather than outfalls These results indicated that point source biochemical oxygen demand was no longer the primary cause of dissolved oxygen depletion Instead the major causes of deoxygenation were nitrification in a shallow surface active reach below Salem and an anomalous oxygen demand believed to be primarily of benthic origin in Portland Harbor

Nutraceuticals and Cancer Signaling Seid Mahdi Jafari, Seyed Mohammad Nabavi, Ana Sanches Silva, 2021-09-24

Today s consumers are looking for food products with health promoting roles in addition to nutritional benefits With current research showing that nutraceuticals and functional foods rich in specific bioactives may have chemopreventative effects these products are increasingly popular However while much in the literature supports the health promoting features of these foods few texts focus on their bioactive agents and their mode of action in cancer signaling Nutraceuticals and Cancer Signalling Clinical Aspects and Mode of Action explains the link between nutraceuticals and cancer in terms of clinical trials and modes of action This book gives an overview of common cancers and their mechanisms and the most common functional foods and their bioactive components Individual chapters focus on specific functional foods including tomatoes garlic honey tea yoghurt and many more their prominent bioactive compounds and their mode of action in cancer signaling and chemoprevention Recent findings on cancer prevention roles of different vitamins and minerals are also discussed For food scientists nutritionists and pharmaceutical experts looking to understand how functional foods can play a
