

## ELECTRICAL

Your motor home has two electrical systems. One provides 115-volt power to operate all 115-volt living area appliances. This system is used when power is available from a public utility or from an on-board generator power plant. The second system uses on-board batteries to provide power for all 12-volt lighting, appliances and accessories as well as normal vehicle needs.

### 115-VOLT SYSTEM

A 25-foot (8.2 m) heavy duty power supply cord is provided in a special storage compartment. This cord is pulled out and connected to any adequate 115-volt power source to activate all power circuits. The connector is rated for 30-amp capacity.

**Ground Fault Interrupter (GFI)** The bathroom and patio outlets are protected by a Ground Fault Interrupter. This device is provided in compliance with ANSI/NFPA 501C requirements, and is intended to protect you against electrical shock possible when using electrical appliances in the bathroom or damp areas. Should the appliance (electric shaver, hair dryer, etc.) develop a potential shock hazard, or if the electrical grounding circuit in the motor home or at an RV campsite is faulty, the GFI device will disconnect the outlet, protecting you from injurious shock.

If the patio outlet doesn't work, check the GFI. Reset it if necessary. If the GFI continues to trip, have the electrical system checked by a qualified electrician.

Your Owner's Packet contains instructional material about the GFI that should be carefully read and understood. Test procedures are outlined there that should be carefully followed and documented.

### 12-VOLT SYSTEM

When the power supply cord is not connected to a 115-volt power source (or to the generator power plant receptacle) power for lights and most appliances is automatically provided from your auxiliary batteries.

### 115-VOLT AC TO 12-VOLT DC CONVERTER

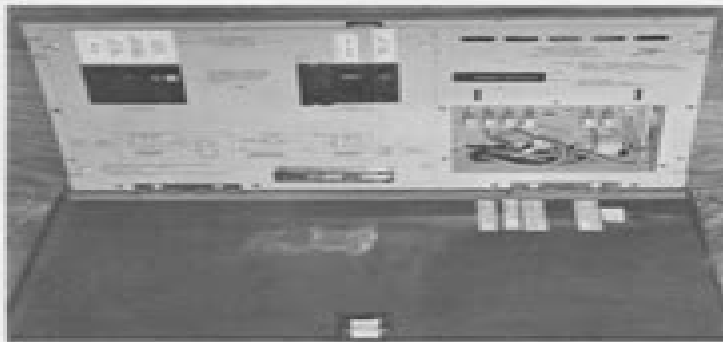

A voltage converter is installed in your electrical system to supply 12-volt system requirements when the motor home is operating on 115-volt AC power. It is centrally located.

When 115-volts are supplied from either an external power supply or the optional auxiliary power plant, the converter will switch the load from the batteries to the converter.

If a battery charger is installed with the converter, auxiliary batteries will be brought up to full charge and maintained by the battery charger as long as 115-volt power is available. Maximum battery charge rate is up to 10 amps depending upon model. See Owner's Information Kit for operation and maintenance instructions.
