Supervised Sequence Labelling with Recurrent Neural Networks Alex Graves, 2012-02-09 Supervised sequence labelling is a vital area of machine learning encompassing tasks such as speech handwriting and gesture recognition protein secondary structure prediction and part of speech tagging Recurrent neural networks are powerful sequence learning tools robust to input noise and distortion able to exploit long range contextual information that would seem ideally suited to such problems However their role in large scale sequence labelling systems has so far been auxiliary The goal of this book is a complete framework for classifying and transcribing sequential data with recurrent neural networks only Three main innovations are introduced in order to realise this goal Firstly the connectionist temporal classification output layer allows the framework to be trained with unsegmented target sequences such as phoneme level speech transcriptions this is in contrast to previous connectionist approaches which were dependent on error prone prior segmentation Secondly multidimensional recurrent neural networks extend the framework in a natural way to data with more than one spatio temporal dimension such as images and videos Thirdly the use of hierarchical subsampling makes it feasible to apply the framework to very large or high resolution sequences such as raw audio or video Experimental validation is provided by state of the art results in speech and handwriting recognition

ECOOP 2005 - Object-Oriented Programming Andrew Black, 2005-07-18 The 19th Annual Meeting of the European Conference on Object Oriented Programming ECOOP 2005 took place during the last week of July in Glasgow Scotland UK This volume includes the refereed technical papers presented at the conference and two invited papers It is traditional to preface a volume of proceedings such as this with a note that emphasizes the importance of the conference in its respective field Although such self evaluations should always be taken with a large grain of salt ECOOP is undisputedly the pre eminent conference on object orientation outside of the United States In its turn object orientation is today's principal technology not only for programming but also for design analysis and specification of software systems As a consequence ECOOP has expanded far beyond its roots in programming to encompass all of these areas of research which is why ECOOP has remained such an interesting conference But ECOOP is more than an interesting conference It is the nucleus of a technical and academic community a community whose goals are the creation and dissemination of new knowledge Chance meetings at ECOOP have helped to spawn

collaborations that span the boundaries of our many subdisciplines bring together researchers and practitioners cross cultures and reach from one side of the world to the other The ubiquity of fast electronic communication has made maintaining these collaborations easier than we would have believed possible only a dozen years ago But the role of conferences like ECOOP in establishing collaborations has not diminished *Franchise Opportunities Handbook* United States.
