Blakey, 2025-07-18 This volume examines the rise and decline of racial science and its relationship to the political and social imposition of Jim Crow in the American South a racialized code of laws grounded upon an inherently racist and prejudicial pseudoscience The author argues here that the study of human beings within the emerging 18th and 19th century institutions of Western science was corrupted by the limited social intuitions of its enslaving colonizing and elitist members Western science and White societies plowed forward in continued ideological adherence to a biodeterministic imagination to justify slavery then Jim Crow racial segregation immigration restriction and other deadly and exploitative eugenical solutions of Social Darwinist thought The story is further complexified by the countervailing theories and voices of Black and Jewish intellectuals in the social and biocultural sciences in the 19th and 20th centuries such as Frederick Douglass W E B Du Bois and Montague Cobb These had profound consequences not only for the social sciences but also for the cultural life of Black Americans in the aftermath and afterlife of slavery At the same time even here the author discloses that the racialized dimensions of social science could not be fully exorcised as social science continued to construct soft line racism in that it selectively primitivized darker people and omitted White racism and colonialism from their human story African American social scientists and historians brought White racism and Black modernity to the fore Eugenics had begun to paint marginal White people Jewish and Italian immigrants to the United States as natural inferiors to Nordics or Aryans with devastating consequences in World War II Europe As the War ended the world community began its turn against racism in science and society In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for

contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies Biosocial Becomings Tim Ingold, Gisli Pálsson, 2013-06-13 Going beyond the division of nature and society this unique book explores human life as a process of biosocial becoming Anthropology and Slavery at the Dawn of White Supremacy Michael L. Blakey, 2025-07-18 This volume examines biological and cultural data that debunk a primordial basis for racism It tracks the ancient history of all social inequity to agricultural and feudal societies The book then focuses on social and ideological developments in European societies associated with religious justifications for the enslavement of others The European Enlightenment built upon those prejudices with ideas about nature and acceptable natural causes of unequal social status for people newly classified into biological races Nineteenth century anthropology is critiqued by African diasporic scholars who are the first Americans to argue that nurture rather than nature is responsible for human variation The American Civil War brought slavery nearly to an end but racist science continued to grow as eugenics applied to justify otherwise unjustifiable structures of human inequality such as Jim Crow segregation as though they are morally sound In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies **Rethinking Human Evolution** Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology s history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizzio Mc Manus Apurva Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit **50 Great Myths of Human Evolution** John H. Unmarking Whiteness and the New American Racism Michael L. Blakey, 2025-07-18 This book criticizes recent performative solutions to racism diversity programs at universities for example and White people s Fragility or intolerance of mature criticism These ideas are locked in an intellectually gated and defensive conversation that effectively denies the ongoing particular abuses of White supremacy This book instead proposes expensive educational and economic changes including reparations as necessary to achieve real equity Once imputed by the eugenical effects of World War II and the Civil Rights Movement s opposition to White racism the word race was largely stricken from scientific writing But biological determinism remained deeply ensconced in an institution of science

that assumed the natural world to be determining making natural science its most authoritative means Authoritative heritability estimates and genetic correlations though spurious continued to imply that obvious racial and class inequalities including their dire health effects were natural and acceptable White people often attempted to unmark their racial identity and assumed that of the uniquely normal people as though an act of anti racism Frankenberg shows On the contrary it served to deny their skin color privileges while enjoying benefits of ongoing structural racism as the only real complete human beings in the room This book uses an ethnology of anthropology to show White people s equivocal views of other s equality in their formal analyses museum collections and exhibitions and treatment of colleagues in recent times They remained deliberately deaf to critical African diasporic scholarship Thus Unmarking gives an anthropological analysis of the social history of White supremacy and shows what it is like for some to confront it In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies

Resources in Education ,1984 **The Dialectical Primatologist** Nicholas Malone, 2021-10-24 The Dialectical Primatologist identifies the essential parameters vital for the continued coexistence of

hominoids apes and humans synthesising primate research and conservation in order to develop culturally compelling conservation strategies required for the facilitation of hominoid coexistence As unsustainable human activities threaten many primate species with extinction effective conservation strategies for endangered primates will depend upon our understanding of behavioural response to human modified habitats This is especially true for the apes who are arguably our most powerful connection to the natural world Recognising the inseparability of the natural and the social the dialectical approach in this book highlights the heterogeneity and complexity of ecological relationships Malone stresses that ape conservation requires a synthesis of nature and culture that recognises their inseparability in ecological relationships that are both biophysically and socially formed and seeks to identify the pathways that lead to either hominoid coexistence or alternatively extinction This book will be of keen interest to academics in biological anthropology primatology environmental anthropology conservation and human animal studies The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

The Iconic Imagination Douglas Hedley, 2016-02-25 Is it merely an accident of English etymology that imagination is cognate with image Despite the iconoclasm shared to a greater or lesser extent by all Abrahamic faiths theism tends to assert a link between beauty goodness and truth all of which are viewed as Divine attributes Douglas Hedley argues that religious ideas can be presented in a sensory form especially in aesthetic works Drawing explicitly on a Platonic metaphysics of the image as a bearer of transcendence The Iconic Imagination shows the singular capacity and power of images to represent the transcendent in the traditions of Christianity Judaism Hinduism and Islam In opposition to cold abstraction and narrow asceticism Hedley shows that the image furnishes a vision of the eternal through the visible and temporal
