But also incumbents of traditional industries are challenged by those digital natives and have therefore either to revitalize their business design or facing the risk to be marginalized. The business design twin of innovation is resilience to create lasting competitive advantage and capture value for the post pandemic world of the 20s. The ultimate idea of the book rests on the hypothesis that only the combination of business design analytics 10C Business Design and the 8 strategic levers of platform strength with intense financial modeling Reverse DCF enables a true understanding of the competitive advantage and value of such business designs. The law and its current challenges regarding data assignment who owns the data EU guidelines data security data protection General Data Protection Regulation cyberattacks competition law right to access vs monopolists permissible and prohibited exchanges of information possible collaborations is the point of departure. In turn the book explores peculiarities in specific areas of Industry 4.0 Internet of Production mechanical engineering artificial intelligence electromobility autonomous driving traffic medical science construction energy industry etc. The book's closing section addresses general developments in management the digital transformation of companies and the world of work and ethical questions *The Attention Deficit* Swati Bhatt, 2019-09-05 Digital technology has enabled connectivity on an unimagined scale. Human beings are social animals and economic activity promotes this socialization. Market transactions are based on optimism about the future faith that the world is good and trust that growth is organic or coming from within the system. Individuals therefore invest in the future by having children by extending credit and accepting risk and by building connections with others in the sincere expectation of this connectivity being reciprocated. This book explores the unintended consequences of ubiquitous connectivity. The first effect is captured by the sharing model. Technology offers multiple avenues for sharing experiences and personal information so active engagement with this increased content uses mental effort. Connection inevitably leads to comparisons with other groups and individuals so despite the benefits of affirmation and group inclusion these links corrode social networks leading to depression and mental apathy. The second effect the result of the commercialization of sharing is encapsulated in the attention deficit model. Loss of self worth driven by the first effect encourages further connectivity and sharing as buyers seek more comfort and reassurance via

social media paying with time and personal information The product is digital content and the payment is with time and data Correspondingly social media fulfills this demand with exuberance both via user generated content and commercially curated content We are overwhelmed with even more information paying with increasingly scarce time and attention Finally the third and most consequential effect is diminished risk taking Attention scarcity as a consequence of the content tsunami throttles cognitive effort impairing judgment and decision making So the safe bet may be to do nothing take no risks and no gambles Weaving together the latest research on economics psychology and neuroscience this book fills a void for readers wanting a smart clear analysis of communications markets and the commercialization of Internet inspired connectivity
