Who Owns the Future? Jaron Lanier, 2014-03-04 Evaluates the negative impact of digital network technologies on the economy and particularly the middle class citing challenges to employment and personal wealth while exploring the potential of a new information economy **Summary of Jaron Lanier's Who Owns the Future?** Everest

Media, 2022-05-09T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The price we pay for the illusion of free information is that most of the overall economy isn't about information Eventually most productivity will become software mediated This could lead to a period of hyper unemployment and political and social chaos 2 People are becoming poorer than they need to be because popular digital designs do not treat people as being special enough in the digital world People are treated as small elements in a bigger information machine when in fact people are the only sources or destinations of information 3 The primary influence on the way technologists think about the future is their direct experience of digital networks through consumer electronics As information technology becomes millions of times more powerful any particular use of it becomes cheaper 4 The cloud is driven by statistics and even in the worst individual cases of personal ignorance dullness idleness or irrelevance every person is constantly feeding data into the cloud these days The value of such information could be treated as genuine but it is not *An Executive Summary of Jaron Lanier's 'Who Owns the Future?'* A. D. Thibeault, 2014-04-12 A full executive summary of Who Owns the Future by Jaron Lanier This is not a chapter by chapter summary Rather the author takes an holistic approach reorganizing and breaking down the content for easier understanding where necessary and cutting out the repetition **The Future of Everything** Tim Dunlop, 2018-09-01

A powerful and realistic message of hope for the future Professor John Quiggin University of Queensland We are in the middle of the greatest technological revolution in history Its epicentre lies in Silicon Valley but its impacts are felt in all corners of the earth It could give all of us a better quality of life and new more cooperative ways of living Or it could further entrench inequality with even more of the world's wealth in the hands of a few This book offers a bold vision for ensuring that we achieve the former A world that is fairer less violent and most radical of all more joyous Tim Dunlop spells out his ideas for reclaiming common ground systematically arguing the case for more public ownership of essential assets more public space a transparent media system and an education that prepares us for the future not the past His vision for democracy and society is practical and inspiring based on ideas about what we are doing well and what we must do better His is a vision for handing political power back to the people so that we can stop playing defence and start changing the ground on which decisions about our lives are made Welcome to the future of everything **Modern Technology and the Human Future** Craig M. Gay, 2018-12-11 Technology has always shaped human life and our understanding of what it means to be human But does it actually encourage human flourishing By exploring the doctrine of the incarnation and what it means for our embodiment Craig Gay raises concerns about the theological implications of modern technologies and movements

The Human Imperative Paul Nemetz, 2023-11-25 This important new book is about power in the age of Artificial Intelligence It looks at what the new technical powers that have accrued over the last decades mean for the freedom of people and for our democracies AI must not be considered in isolation but rather in a very specific context the concentration of economic and digital technological power that we see today Analysis of the effects of AI requires that we take a holistic view of the business models of digital technologies and of the power they exercise Technology economic power and political power are entering into ever closer symbiosis Digital technologies and their corporate masters now know more than people know about themselves or governments know about the world These technologies accumulate more and more decision making powers Taken together this leads to a massive asymmetry of knowledge and power in the relationship between man and machine The classical models of action and decision making in democratic societies are being gradually undermined by such developments In a new way the question of the control of technical power arises This is the first book to look in detail in a holistic way at the challenges of digital power and Artificial Intelligence to Democracy and Liberties and to set out what can and needs to be done about these challenges in terms of engineering ethics and democratic action of policy making and legislation Key audiences are scholars in media sciences political sciences computer sciences and engineering law and philosophy as well as policy makers corporate and civil society leaders and the educated public Adapted and updated from the original German language book *Prinzip Mensch Macht Freiheit und Demokratie im Zeitalter der Künstlichen Intelligenz* published 2020 by Verlag J H W Dietz Nachf GmbH

universal addressing systems from interfaces drawn by the augmentation of the hand and eye to users identified by self quantification and the arrival of legions of sensors algorithms and robots Together how do these distort and deform modern political geographies and produce new territories in their own image In *The Stack* Benjamin Bratton proposes that these different genres of computation smart grids cloud platforms mobile apps smart cities the Internet of Things automation can be seen not as so many species evolving on their own but as forming a coherent whole an accidental megastructure called The Stack that is both a computational apparatus and a new governing architecture We are inside The Stack and it is inside of us In an account that is both theoretical and technical drawing on political philosophy architectural theory and software studies Bratton explores six layers of The Stack Earth Cloud City Address Interface User Each is mapped on its own terms and understood as a component within the larger whole built from hard and soft systems intermingling not only computational forms but also social human and physical forces This model informed by the logic of the multilayered structure of protocol stacks in which network technologies operate within a modular and vertical order offers a comprehensive image of our emerging infrastructure and a platform for its ongoing reinvention The Stack is an interdisciplinary design brief for a new geopolitics that works with and for planetary scale computation Interweaving the continental urban and perceptual scales it shows how we can better build dwell within communicate with and govern our worlds thestack.org *Beyond the Valley* Ramesh Srinivasan, 2020-09-01 How to repair the disconnect between designers and users producers and consumers and tech elites and the rest of us toward a more democratic internet In this provocative book Ramesh Srinivasan describes the internet as both an enabler of frictionless efficiency and a dirty tangle of politics economics and other inefficient inharmonious human activities We may love the immediacy of Google search results the convenience of buying from Amazon and the elegance and power of our Apple devices but it's a one way top down process We're not asked for our input or our opinions only for our data The internet is brought to us by wealthy technologists in Silicon Valley and China It's time Srinivasan argues that we think in terms beyond the Valley Srinivasan focuses on the disconnection he sees between designers and users producers and consumers and tech elites and the rest of us The recent Cambridge Analytica and Russian misinformation scandals exemplify the imbalance of a digital world that puts profits before inclusivity and democracy In search of a more democratic internet Srinivasan takes us to the mountains of Oaxaca East and West Africa China Scandinavia North America and elsewhere visiting the design labs of rural low income and indigenous people around the world He talks to a range of high profile public figures including Elizabeth Warren David Axelrod Eric Holder Noam Chomsky Lawrence Lessig and the founders of Reddit as well as community organizers labor leaders and human rights activists To make a better internet Srinivasan says we need a new ethic of diversity openness and inclusivity empowering those now excluded from decisions about how technologies are designed who profits from them and who are surveilled and exploited by them The Hands-On Life Amy E.
