Prospects for Alternative Energy Development in the U.S. West John C. Pierce, Brent S. Steel, 2017-04-04 This book poses the question of whether identifiable individual level attributes e g values interests knowledge demographic

characteristics lead to support for or opposition to the development and implementation of alternative energy technologies In recent years attempts to site alternative energy technologies e g wind solar wave have been met by intense opposition from a variety of sources including many environmentalists from whom one might expect support for non carbon based renewable energy initiatives This volume argues that there are indeed such discernible attributes and moreover that the identification and exploration are important for the development of support strategies for the well informed and achievable siting of such technologies

Hamilton,2015-05-18 Presented in nontechnical terms this book offers a unique and powerful conceptual framework for analysis of energy technologies standard and alternative in terms of their respective dollar costs environmental costs and national security costs Energy technologies examined include coal nuclear oil natural gas solar wind geothermal hydropower biomass and biogas energy conservation and efficiency ocean power hydrogen electric power and transmission and transportation This three point framework allows

examination of issues and problems associated with implementation of U S energy policies in the context of major social goals such as growth and equity with treatment of conflicts and trade offs between energy development and other social values such as health and safety cultural historical and aesthetic values These are the key political issues for policy makers formulating national energy policy and decisions makers implementing it **Renewable Energy and the Public** Patrick Devine-Wright,2011 First Published in 2010 Routledge is an imprint of Taylor Francis an informa company *The Political Economy of Clean Energy Transitions* Douglas Arent,Channing Arndt,Mackay Miller,Finn Tarp,Owen Zinaman,2017 A volume on the political economy of clean energy transition in developed and developing regions with a focus on the issues that different countries face as they transition from fossil fuels to lower carbon technologies *Sustainable Management of Electronic Waste* Abhishek Kumar,Pramod Singh Rathore,Ashutosh Kumar Dubey,Arun Lal Srivastav,Vishal Dutt,T. Ananth Kumar,2024-02-28 SUSTAINABLE MANAGEMENT OF ELECTRONIC WASTE Written and edited by a group of industry professionals this new volume provides cutting edge insights into how the sustainability of managing electronic waste can be achieved for engineers scientists and students As a result of the rapid advancement of technology and the globalization of the economy waste electrical and electronic equipment WEEE management has become increasingly important Manufacturers are especially concerned about the proper disposal of their waste and researchers need to identify the obstacles and enablers that stand in the way of implementing a long term WEEE management system in order to develop a long term WEEE management system Further the literature did not adequately capture the perspectives of multiple stakeholders while also identifying the enablers required for the development of sustainable WEEE management policies which was particularly important in developing countries This volume fills a gap in the literature by considering the perspectives of multiple stakeholders to identify enablers of sustainable WEEE management in emerging economies which was previously unexplored This book focuses on the most recent technological advancements for the twenty first century emphasizing the synergies that exist between computer science bioinformatics and other sciences The research and development of artificial intelligence machine learning blockchain technologies quantum computing with cryptography nanotechnology sensors based on biotechnology Internet of Things devices nature inspired algorithms computer vision techniques computational biology and other topics are covered in this book along with their applications in the fields of science engineering physical science and economics Modern environmental techniques are among the most innovative innovations emerging as a result of the insatiable demand for health standards in the modern world **Unsustainable** James T. Bennett,2021-08-20 This book examines the history politics and economics of alternative energy Since the energy crisis of the 1970s governments around the world have subsidized and otherwise incentivized alternative forms of energy to reduce dependence on fossil fuels This search has taken on added urgency in the twenty first century as the specter of climate change has engendered ambitious state level renewable portfolio standards enhanced federal incentives and inspired 100% renewable electrical generation

targets in such states as Vermont and Hawaii To save the planet from destruction wind solar and other renewable energy alternatives must replace fossil fuels But how did we get here and what is the cost After an in depth study of the Carter administration s synthetic fuels program the focus shifts to the two most prominent perhaps most promising and certainly most promoted and government subsidized green and renewable energies today wind and solar Because wind has made the most headway and drawn the most controversy it receives the most attention Although the primary focus is on the American experience with renewable energy the policies and politics of renewables in Scotland Wales Denmark Spain and other European nations are also discussed Issues considered in the book include the nature and efficacy of renewable subsidies the employment of federal and state tax codes to encourage renewables the lobbies and interest groups that campaign for government support of renewables and the fierce battles over the siting of renewable facilities Unlike other works on this subject the book probes in depth the nature of the opposition to wind and solar both in the matter of siting and in their worthiness as recipients of substantial government assistance

Simon, 2020-01-21 A supplemental text for upper division and graduate courses on environmental or energy politics policy offered in departments of political science as well as Masters in Public Policy programs *Earth* Frank H. T. Rhodes, 2012-06-10 It's impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It's a survival issue This is the only planet we have We're stuck here and we don't own the place it would be the height of arrogance to assume that we do We're tenants here not owners but we're tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant's Manual In *Earth A Tenant's Manual* the distinguished geologist Frank H. T. Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth's livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and the clashes over the energy resources needed for the Earth's exploding population He concludes with an extended exploration of humanity's prospects on a complex protean and ultimately finite world It is not a question of whether the planet is sustainable the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is sustainable Only new resources new priorities new policies and most of all new knowledge can reverse the damage that humanity is doing to our home and ourselves A sustainable human future Rhodes concludes in this eloquent sobering but ultimately optimistic book will require a sense of responsible stewardship for we are not owners of this planet we are tenants Surveying the systems large and small that govern Earth's processes and influence its changes Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home

The End of Energy Michael J. Graetz, 2011-03-04 Forty years of energy incompetence villains failures of leadership and missed opportunities Americans take for granted that when we flip a switch the light will go on when we turn up the thermostat the room will get warm and when we pull up to the pump gas will be plentiful and relatively cheap In *The End of Energy* Michael Graetz shows us that we have been living an energy delusion for forty years Until the 1970s we produced domestically all the oil we needed to run our power plants heat our homes and fuel our cars Since then we have had to import most of the oil we use much of it from the Middle East And we rely on an even dirtier fuel coal to produce half of our electricity Graetz describes more than forty years of energy policy incompetence and argues that we must make better decisions for our energy future Despite thousands of pages of energy legislation since the 1970s passed by a Congress that tended to elevate narrow parochial interests over our national goals Americans have never been asked to pay a price that

reflects the real cost of the energy they consume Until Americans face the facts about price our energy incompetence will continue and along with it the unraveling of our environment security and independence *Democracy, Environment, and Technology* Elias G. Carayannis, Vasili Erokhin, 2025-09-26 The 21st century is witnessing an unprecedented convergence of transformative technologies that promise to reshape global energy systems governance and societal well being Among these Public Interest Technology PIT Artificial Intelligence AI and Fusion Energy stand out as critical domains with the potential to drive sustainable development economic growth and equitable progress This book explores the concepts of PIT AI and Fusion in ten chapters It begins by tracing the evolution of PIT emphasizing its role in addressing global challenges through socio technical frameworks Key themes include the ethical and practical challenges of PIT such as data privacy algorithmic bias and funding barriers as well as its potential to drive equitable solutions The importance of stakeholder inclusion particularly from the Global South and frameworks to manage uncertainties in technology investments are highlighted Case studies illustrate successful PIT implementations such as AI driven sustainability projects and fusion energy initiatives while underscoring the need for interdisciplinary collaboration and adaptive governance The later chapters focus on fusion energy as a PIT advocating for open science international cooperation and flexible investment strategies to overcome technical and financial hurdles In these chapters ideas that fusion energy if developed inclusively could revolutionize global energy systems and combat climate change are discussed and governance models such as international commissions and public private partnerships to ensure equitable access and ethical development are proposed Similarly discussions on AI stress its dual potential to either exacerbate inequality or democratize opportunities depending on policy and implementation
