

Alto® Quick-Start Guide

Step 1: Upon Receipt

Carefully remove packing materials and save for future shipment or storage. Confirm receipt of instrument and all components. Examine your Alto for any damage incurred during transit and verify that the microSD is already installed.

Step 2: Downloading the software and connecting the device

Download the Cerillo Labrador software onto your computer at cerillo.bio/software. Use the provided USB cord to connect your Alto to your computer and confirm communication between Labrador and your Alto. Connecting wirelessly: Connect Canopy to your computer and power your Alto (Step 6). Follow instructions on the Canopy Quick Start Guide to set up and confirm communication between Labrador, Canopy, and your Alto.

Step 3: Experimental setup

Set the measurement interval in Labrador by clicking on your device and then Settings (gear icon in the top-right corner of the screen). Formatting your plate layout/data is easiest after running your experiment. Place your Alto where you'd like to collect measurements. This is anywhere your samples will be happy— in an incubator, anaerobic chamber, benchtop, hood, etc. See detailed specs in your User Manual.

Step 4: Power the device

Use the USB cable provided to plug your Alto into the power adapter and a standard wall outlet, a battery pack, or a computer.

Step 5: Allow for equilibration

Ensure that the Alto maintains a consistent temperature throughout the experiment, particularly during calibration. To achieve this, allow the Alto to adjust to new environmental conditions while connected to power for a minimum of 4 hours. For optimal results, consider overnight equilibration, such as placing the Alto in an incubator after inoculating your starter culture. If feasible, allow the plate to equilibrate as well.

Step 6: Seal your plate

Measurements can be taken with or without a plate lid or using a transparent, breathable membrane. Membranes, such as Breathe-Easy, are most effective at preventing measurement errors caused by condensation or evaporation.

Step 7: Go! (See reverse side)

Note: If your experiments require shaking, we recommend shaking at 350rpm. Check user manual for more instructions.
