Turbulence By Jan Mark:

Turbulence Russell J. Marcuso, 2012 In fluid dynamics turbulence or turbulent flow is a fluid regime characterised by chaotic stochastic property changes This includes low momentum diffusion high momentum convection and rapid variation of pressure and velocity in space and time This book presents current research data in the study of turbulence including topics such as modelling turbulent mixing in the global ocean investigating the influence of atmospheric turbulence in the reliability and performance of free space optical communication systems turbulent scales in engineering local versus non local processes in turbulent flows and cosmic rays and astrophysical turbulence Numerical Solution of the Equations for Compressible Laminar, Transitional, and Turbulent Boundary Layers and Comparisons with Experimental Data Julius E. Harris, United States. National Aeronautics and Space Administration, 1971 A numerical method for solving the equations for laminar transitional and turbulent compressible boundary layers for either planar or axisymmetric flows is presented The fully developed turbulent region is treated by replacing the Reynolds stress terms with an eddy viscosity model The mean properties of the transitional boundary layer are calculated by multiplying the eddy viscosity by an intermittency function based on the statistical production and growth of the turbulent spots A specifiable turbulent Prandtl number relates the turbulent flux of heat to the eddy viscosity A three point implicit finite difference scheme is used to solve the system of equations The momentum and energy equations are solved simultaneously without iteration Numerous test cases are compared with experimental data for supersonic and hypersonic flows these cases include flows with both favorable and mildly unfavorable pressure gradient histories mass flux at the wall and traverse curvature **Compressible Turbulent Boundary Layers** , 1969 *Comparison of Prediction Methods and Studies of Relaxation in Hypersonic Turbulent Nozzle-wall Boundary Layers* Dennis M. Annotation Design Methodologies for Space Transportation Systems is a sequel to the author s earlier text Space Transportation A Systems Approach to Analysis and Design Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems and they reflect a wealth of experience by the author with the design and management of space systems The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis Individual chapters are devoted to specific disciplines such as aerodynamics aerothermal analysis structures materials propulsion flight mechanics and trajectories avionics and computers and control systems The final chapters deal with human factors payload launch and mission operations safety and mission assurance The two texts by the author provide a valuable source of information for the space transportation community of designers operators and managers A companion CD ROM succinctly packages some oversized figures and tables resources for systems engineering and launch ranges and a compendium of software programs The computer programs include the USAF AIRPLANE AND MISSILE DATCOM CODES with extensive documentation COSTMODL for software costing OPGUID launch vehicle trajectory generator SUPERFLO a series of 11 programs intended for solving compressible flow problems in ducts and pipes found in industrial facilities and a wealth of Microsoft Excel spreadsheet programs covering the disciplines of statistics vehicle trajectories propulsion performance math utilities **River Flow 2014** Anton J. Schleiss,Giovanni de Cesare,Mario J. Franca,Michael Pfister,2014-08-12 The behaviour of river systems is a result of the complex interaction between flow sediments morphology and habitats Furthermore rivers are often used as a source of water supply and energy production as well as a waterway for transportation The main challenge faced by river engineers today in collaboration with environmental and ecological scientists is to restore the channelized rivers under the constraints of high urbanization and limited space as well as sustainable water use During the seventh International Conference on Fluvial Hydraulics River Flow 2014 at cole Polytechnique F d rale de Lausanne EPFL Switzerland scientists and professionals from all over the world addressed this challenge and exchanged their knowledge regarding fluvial hydraulics and river morphology This book comprises the proceedings of the high quality contributions of the participants which reflect the state of the art in the fields of river hydrodynamics morphodynamics sediment transport river engineering and restoration The conference was organized under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR Past River Flow conferences have witnessed a significant increase in participation of our community of river engineers and researchers confirming the need for such a forum Scientific and Technical Aerospace Reports ,1994-03
