Materials Science and Engineering Malcolm McLean, 2024-11-01 This book is a record of the conference entitled Materials Science and Engineering Its Nucleation and Growth held at Imperial College on 14 and 15 May 2001 as one of the events held to mark the 150th Anniversary of the founding of the Royal School of Mines RSM **A Long Cold War** Jerry Carrier, 2017-11-10 A Long Cold War is a two volume cultural history of Cold War America from 1945 to 1991 This is the story of America at her peak as a world power with the fear of nuclear war and the hyper competition with the USSR and China a good read for the historical nostalgic or even casual reader Basketball Card Price Guide James Beckett, 1997-11 Dr James Beckett the world s leading expert on sports card collecting slam dunks the competition with his newly updated guide to collectible basketball cards Here are complete listings of every card issued from 1948 to 1997 featuring such series as Collector s Choice Finest Flair Fleer Hoops Jam Session Skybox SP Championship Stadium Club Star Topps Ultra and more Photos throughout **Who's Who in Finance and Business** Marquis Who's Who, LLC, National Register Publishing, 2005-12 **Atomic and Molecular Beams** Cyril Bernard Lucas, 2013-12-13 Atomic and molecular beams are employed in physics and chemistry experiments and to a lesser extent in the biological sciences These beams enable atoms to be studied under collision free conditions and allow the study of their interaction with other atoms charged particles radiation and surfaces Atomic and Molecular Beams Production and Collimation explores the latest techniques for producing a beam from any substance as well as from the dissociation of hydrogen oxygen nitrogen and the halogens The book not only provides the basic expressions essential to beam design but also offers in depth coverage of Design of ovens and furnaces for atomic beam production Creation of atomic beams that require higher evaporation temperatures Theory of beam formation including the Clausing equation and the transmission probability Construction of collimating arrays in metals plastics glass and other materials Optimization of the design of atomic beam collimators While many review articles and books discuss the application of atomic beams few give technical details of their production Focusing on practical application in the laboratory the author critically reviews over 800 references to compare the atomic and molecular beam formation theories with actual experiments Atomic and Molecular Beams Production and Collimation is a comprehensive source of material for experimentalists facing the design of any atomic or molecular beam and theoreticians wishing to extend the theory *Atomic and Molecular Beams* Roger Campargue, 2001-01-25 This title covers the state of the art in this field both theoretically and experimentally With contributions from leading researchers including several Nobel laureates it represents a long lasting source of reference on all aspects of fundamental research into or using atomic and molecular beams Some Investigations Using Atomic Beams M. A. Player, 1970 **Atomic Diffusion in Glasses Studied with Coherent X-Rays** Manuel Ross, 2016-01-13 This thesis provides the first successful study of jump diffusion processes in glasses on the atomic scale utilizing a novel coherent technique This new method called atomic scale X ray Photon Correlation Spectroscopy or

aXPCS has only recently been proven to be able to capture diffusion processes with atomic resolution in crystal systems. With this new toolkit for studying atomic diffusion in amorphous systems, new insight into basic processes in a wide range of technically relevant materials like fast ionic conductors can be obtained.

Some Experiments Using Atomic Beams J. S. Martin, 1957

Ultrafast Dynamics Driven by Intense Light Pulses Markus Kitzler, Stefanie Gräfe, 2015-07-24

This book documents the recent vivid developments in the research field of ultrashort intense light pulses for probing and controlling ultrafast dynamics. The recent fascinating results in studying and controlling ultrafast dynamics in ever more complicated systems such as bio molecules and structures of meso to macroscopic sizes on ever shorter time scales are presented. The book is written by some of the most eminent experimental and theoretical experts in the field. It covers the new groundbreaking research directions that were opened by the availability of new light sources such as fully controlled intense laser fields with durations down to a single oscillation cycle, short wavelength laser driven attosecond pulses and intense X ray pulses from the upcoming free electron lasers. These light sources allowed the investigation of dynamics in atoms, molecules, clusters on surfaces and very recently also in nanostructures and solids in new regimes of parameters which in turn led to the identification of completely new dynamics and methods for controlling it. Example topics covered by this book include the study of ultrafast processes in large molecules using attosecond pulses, control of ultrafast electron dynamics in solids with shaped femtosecond laser pulses, light driven ultrafast plasmonic processes on surfaces and in nanostructures as well as research on atomic and molecular systems under intense X ray radiation. This book is equally helpful for people who would like to step into this field, e.g. young researchers for whom it provides a broad introduction as well as for already experienced researchers who may enjoy the exhaustive discussion that covers the research on essentially all currently studied objects and with all available ultrafast pulse sources.

Looking at Atoms and Molecules Suzanne Slade, 2006-07-15

Trace the remarkable evolution of scientific instruments from the compound microscopes of the 16th century to the miniscule microscopes being developed today.

Continuous Beams of Cold Atoms for Space Applications, The precision of atomic state measurements should ideally be limited by irreducible fluctuations associated with the number of atoms available, e.g. shot noise or quantum projection noise. In practice, other noise sources can limit the precision achievable; a well known effect is the intermodulation effect or Dick effect which degrades the stability of atomic fountain clocks using pulsed sources. One way to beat this source of instability consists of interrogating the atoms with a microwave signal derived from exceptionally stable local oscillators such as cryogenic oscillators which are however

bulky and not ideally suited to the constraints of space Another way of reaching atomic noise limited instability is to use continuous sources of cold atoms Experimental results obtained both on a fountain standard and on an experimental Cs fountain illustrate the potential of continuous cold atomic beams for improving signal to noise ratio and precision of measurement Current developments towards higher atomic beam flux are also described
