Crutzen: A Pioneer on Atmospheric Chemistry and Climate Change in the Anthropocene Paul J. Crutzen, Hans Günter Brauch, 2016-04-15 This open access book contains texts by the Nobel laureate Paul J Crutzen who is best known for his research on ozone depletion It comprises Crutzen's autobiography several pictures documenting important stages of his life and his most important scientific publications The Dutch atmospheric chemist is one of the world's most cited scientists in geosciences His political engagement makes him a tireless ambassador for environmental issues such as climate change He popularized the term Anthropocene for the current geological era acknowledging the enduring influence of humankind on planet Earth This concept conceives humans to be a geologic factor influencing the evolution of our globe and the living beings populating it The selection of texts is representing Paul Crutzen's scientific oeuvre as his research interests span from ozone depletion to the climatic impacts of biomass burning the consequences of a worldwide atomic war the Nuclear Winter to geoengineering and the Anthropocene This book is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com [Interactions Among Emissions, Atmospheric Chemistry, and Climate Change](#)

Chien Wang, Ronald G. Prinn, MIT Joint Program on the Science and Policy of Global Change, 1997 *Atmospheric Chemistry in a Changing World* Guy P. Brasseur, 2003-05-14 Summarizes and integrates more than a decade of atmospheric chemistry research carried out under the auspices of the International Global Atmospheric Chemistry IGAC Project of the International Geosphere Biosphere Programme IGBP [Global Aspects of Atmospheric Chemistry](#), 1999-03-01 Atmospheric Chemistry has been a rapidly growing field with a recent focus on the major aspects of global environmental change including stratospheric ozone depletion UV B change and global warming This book describes recent developments in our understanding of the global aspects of the chemistry in the main parts of the atmosphere troposphere and stratosphere as obtained from field observations laboratory investigations and modeling studies Although this chemistry is largely driven by reactions between gas phase species recent progress made in the understanding of chemical reactions occurring in clouds and on the surface of aerosols is also reported [Global Atmospheric Chemical Change](#) C.N. Sturges, 2013-11-11 Air pollution has historically been viewed as a local or regional scale problem with attention focused on acute episodes such as the sulphur dioxide and smoke smogs of London in the 1950s and 1960s and the photochemical smogs of southern California first recognized by Haagen Smit in the early 1950s In recent years however it has become apparent that human activity has and still is changing the chemical composition of the atmosphere on a global scale The composition of the atmosphere has seen enormous changes due to natural processes since the formation of the planet Data obtained from

air bubbles trapped in polar ice are beginning to reveal information about these changes over the last tens of thousands of years and geochemical models of the evolution of the Earth give us insights into the changes over much longer periods of time Perhaps the crucial differences between these natural changes and those now being induced by man are their relative rates of change The magnitude of present day fluxes of some compounds released as air pollutants is in some cases much larger than those arising naturally In other cases for example carbon dioxide the anthropogenic emission rates are small compared with that of the natural cycle but the kinetics of the system are such that the steady state concentrations of the compounds in the atmosphere are now being perturbed

The Chemistry of the Atmosphere John W. Birks, 1993
