

ADJUSTMENTS AND SERVICE INSTRUCTIONS

ALL MECHANICAL MODELS

Prevent knives from faulty slides, most of which can be avoided with proper maintenance.

It is recommended that the payout slides be removed from the machine at frequent intervals and closed and inspected.

They should be cleaned with hot soapy water to remove dirt and any beer residue that may have been carried through on the coils. They should be thoroughly dried and polished with a soft lint free cloth.

Check that all wiper springs are intact and that they are set correctly, i.e. that the under face of the spring is flush with the bottom face of the slide and the tip or point does not project into the bore of the slide. Reset or replace any faulty ones. See Fig. 1.

FIG. 2

Most important, it is much better to replace a spring at a minor expense than to suffer payout troubles because of inadequate slide spring tension. This applies particularly to the Master (or Bottom) Slide spring.

After replacing the slide stack it is wise to check the slide finger (knife) engagement with each slide. Each slide finger should engage the slide it controls approximately in the centre of the slide thickness and to a depth of between $1/8"$ to $3/16"$ when the slide is at rest on the finger. See Fig. 3.

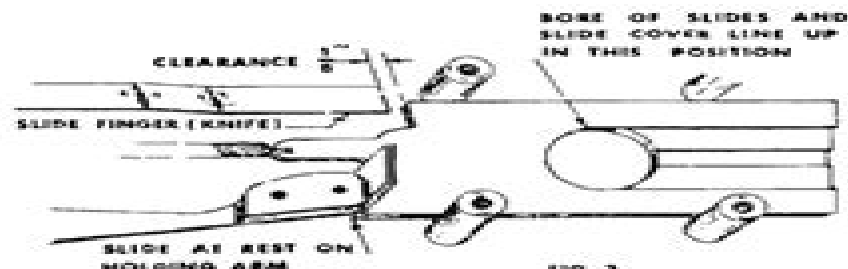

FIG. 3

PAYOUT SLIDES

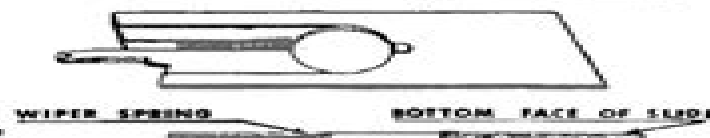

FIG. 1

Carefully inspect each slide return spring for breakage or fatigue. Fatigue can be recognized by the coils of the spring not being tight against each other (that is, if held up against the light daylight can be seen between coils) or general feeling of softness when bending the spring. Broken eyes or other breakages should not be repaired by shortening the spring; the spring should be replaced. Shortening the spring will increase its tension and cause excessive wear on the slide slides, slide fingers, and slide holding arm pad.

These slide springs do a lot of hard work and their fitness to perform their function properly is

Slide finger clearance should also be checked to ensure that, when the slides are at rest on the Slide Holding Arm pad, the clearance between the tip of the slide fingers and the slides is correct. This clearance should be $1/8"$ as shown in Fig. 3. If it is greater, the slides being released will cause an excessive wear to both slide face and fingers. Therefore it is important that slides or fingers showing wear should not be filed but replaced, as filing will increase the recommended gap.
