

Guideline for administering supplemental protein

1. Supplemental protein will be administered to deliver ~1.5 g/kg of protein/day (1.2-1.5 g/kg in the medical patient and 1.5-2 g/kg in burn, surgical, and trauma patient after the patient is deemed ready to start enteral feeding).
2. Protein supplementation will be administered as a bolus via the nasal/oral feeding tube, 2-4 times per day depending on product used.
3. Enteral feeding will be ordered according to current institutional protocols but supplemental protein will be calculated and administered independently of recommended formula intake.
4. Supplemental protein will be reduced by 50% if a patient received 75% of caloric intake over the previous 24-hour period.
5. Once the patient reaches target caloric intake for 48 hours, supplemental protein will be calculated to include the protein contained in the enteral formula and adjusted accordingly.
6. Consider 24-hour urine collections weekly in order to determine nitrogen balance and to guide adjustments in protein supplementation.

Contraindications to administering supplemental protein

Absolute:

1. Any situation where enteral feeding is not indicated (see ICU nutritional support guidelines)
2. Hepatic encephalopathy

4. Attending physician (intensivist) preference
