

Assessment and Student Success in a Differentiated Classroom

By Carol Ann Tomlinson and Tonya R. Moon

ASCD, 2013

Chapter 1. Differentiation: An Overview

Note that differentiation relates more to addressing students' different phases of learning from novice to capable to proficient rather than merely providing different activities to different (groups of) students.

—John Hattie, *Visible Learning for Teachers*

Differentiation of instruction is often misconstrued. It would be handy to represent differentiation as simply instructional decision making through which a teacher creates varied learning options to address students' diverse readiness levels, interests, and learning preferences. Although that approach is attractive because it simplifies teacher thinking, administrator feedback, and professional development design, it is ineffective and potentially dangerous. To see differentiation as an isolated element reduces teaching to a series of disconnected components that function effectively apart from the whole. The more difficult and elegant truth is that effective teaching is a system composed of interdependent elements. As with all systems, each part is enhanced when others are enhanced, and each part is diminished when any part is weakened.

Robust teaching links five classroom elements so that each one flows from, feeds, and enhances the others. Those elements are learning environment, curriculum, assessment, instruction, and classroom leadership and management (Tomlinson & Moon, 2013). This chapter provides a brief overview of each of the elements as they relate to one another and to differentiation. Understanding the mutuality that excellent teachers strive to achieve among the elements also establishes a clear context for an extended discussion of the powerful role of assessment in differentiation. Figure 1.1 provides a flowchart or concept map of the key elements of differentiation.

Learning Environment and Differentiation

Learning environment refers to both the physical and the affective climate in the classroom. It is the “weather” that affects everything that happens there. Few students enter a classroom at the outset of a new school year asking, “What can you teach me about grammar?” (or the periodic table or cursive writing or planets). Rather, they come with an overriding question: “How is it going to be for me in this place?” The nature of the learning environment for that young person will, in large measure, answer that question.

Regardless of the age of the learners, they ask questions such as these (Tomlinson, 2003):

- Will I be affirmed in this place? (Will people accept me here—find me acceptable? Will I be safe here as I am? Will people listen to me and hear me? Will someone know how I’m doing and how I’m feeling? Will they care? Will people value my interests and dreams? Will my perspectives be honored and acted upon? Will people here believe in me and in my capacity to succeed?)
- Can I make a contribution in this place? (Will I make a positive difference in the work that goes on here? Do I bring unique and important abilities to the work we need to do? Can I help others and the class as a whole do better work and accomplish more important things than if I weren’t here? Will I feel connected to others through common goals?)

Integrating Differentiated Instruction and Understanding by Design Carol Ann Tomlinson, Jay McTighe, 2006-01-15 Teachers struggle every day to bring quality instruction to their students Beset by lists of content standards and accompanying high stakes accountability tests many educators sense that both teaching and learning have been redirected in ways that are potentially impoverishing for those who teach and those who learn Educators need a model that acknowledges the centrality of standards but also ensures that students truly understand content and can apply it in meaningful ways For many educators Understanding by Design addresses that need Simultaneously teachers find it increasingly difficult to ignore the diversity of the learners who populate their classrooms Few teachers find their work effective or satisfying when they simply serve up a curriculum even an elegant one to students with no regard for their varied learning needs For many educators Differentiated Instruction offers a framework for addressing learner variance as a critical component of instructional planning In this book the two models converge providing readers fresh perspectives on two of the greatest contemporary challenges for educators crafting powerful curriculum in a standards dominated era and ensuring academic success for the full spectrum of learners Each model strengthens the other Understanding by Design is predominantly a curriculum design model that focuses on what we teach Differentiated Instruction focuses on whom we teach where we teach and how we teach Carol Ann Tomlinson and Jay McTighe show you how to use the principles of backward design and differentiation together to craft lesson plans that will teach essential knowledge and skills for the full spectrum of learners Connecting content and kids in meaningful ways is what teachers strive to do every day In tandem UbD and DI help educators meet that goal by providing structures tools and guidance for developing curriculum and instruction that bring to students the best of what we know about effective teaching and learning
