Shrimp infectious myonecrosis strategy manual Food and Agriculture Organization of the United Nations, 2019-09-30 This Shrimp infectious myonecrosis strategy manual provides key information for national policy makers relevant to the development of contingency plans for countries producers and other stakeholders with regard to outbreaks of infectious myonecrosis IMN a viral disease of farmed marine penaeid shrimp that is listed by the World Organisation for Animal Health OIE IMN is a viral disease discovered in 2002 that has caused substantial mortalities in populations of cultured Pacific whiteleg shrimp *Penaeus vannamei* initially reported in Brazil 2002 and Indonesia 2006 and recently in India 2016 and Malaysia 2018 The purpose of this manual is to provide support for the various components of a national contingency plan The information provided includes 1 the nature of IMN providing a brief review of disease etiology susceptible species and global distribution 2 diagnosis of infection describing the gross clinical signs of disease field diagnostic methods differential and laboratory methods for diagnosis 3 prevention and treatment providing information on vaccination and resistance and immunity of the hosts 4 epidemiology providing information on IMNV s geographic distribution persistence in the environment modes of transmission vectors and reservoir hosts factors influencing disease transmission and expression and impact of the disease 5 principles of control and eradication describing the methods and 6 policy development and implementation summarizing the overall policy IMN specific objectives problems overview of response options strategies for eradication and control capacity building and funding and compensation **Handbook on**

Ingredients for Aquaculture Feeds J.W. Hertrampf, F. Piedad-Pascual, 2012-12-06 Current growth in global aquaculture is paralleled by an equally significant increase in companies involved in aquafeed manufacture Latest information has identified over 1 200 such companies not including those organizations in production of a variety of other materials i e vitamins minerals and therapeutics all used in varying degrees in proper feed formulation Aquaculture industries raising particular economically valued species i e penaeid shrimps and salmonids are making major demands on feed ingredients while relatively new industries such as tilapia farming portend a significant acceleration in demand for properly formulated aquafeeds by the end of the present decade and into the next century As requirements for aquafeeds increases shortages are anticipated in various ingredients especially widely used proteinaceous resources such as fish meal A variety of other proteinaceous commodities are being considered as partial or complete replacement for fish meal especially use of plant protein sources such as soybean meal In the past five years vegetable protein meal production has increased 10% while fish meal production has dropped over 50% since 1989 largely attributed to overfishing and serious decline in wild stock Throughout fisheries processing industries traditional concepts as waste have given way to more prudent approaches emphasizing total by product recovery Feed costs are a major consideration in aquaculture where in some groups i e salmonids high protein containing feeds using quality fish meal can account for as much as 40 to 60% of production costs

CRC Handbook of Mariculture James P. McVey, 1993-04-26 The Second Edition of the CRC Handbook of Mariculture provides an extensive comparison of marine shrimp culture techniques from around the world This extensively revised and updated Second Edition focuses on growout systems that have contributed to the production success of shrimp farms and systems worldwide Topics covered include methods for the culture and preparation of algae rotifers Artemia and other foodstuffs for use in crustacean farms recent developments on enriching larval food organisms to improve crustacean diets conditioning and spawning penaeid shrimp obtaining and manipulating shrimp eggs and sperm for controlled reproduction and use of intensive nursery raceways for juvenile shrimp production and discussions of many types of marine shrimp growout systems In addition culture systems used in Hawaii Ecuador Taiwan and Japan are described in detail Significant new information from Japan on hormonal control of penaeid shrimp maturation and spawning is discussed Marine shrimp and Macrobrachium shrimp diseases by the foremost authorities in the area are presented with detailed photographs and illustrations to help identify diseases The book also includes an update on American lobster larval and juvenile culture

Handbook of Food and Feed from Microalgae Eduardo Jacob-Lopes, Maria Isabel Queiroz, Mariana Manzoni Maroneze, Leila Queiroz Zepka, 2023-06-09 Handbook of Food and Feed From Microalgae Production Application Regulation and Sustainability is a comprehensive resource on all aspects of using microalgae in food and feed This book covers applied processes including the utilization of compounds found in microalgae the development of food products with microalgae biomass in their composition the use of microalgae in animal nutrition and associated challenges and recent advances in this field Written by global leading experts in microalgae this book begins with the fundamentals of food and feed including microalgal biodiversity biogeography and nutritional purposes The book continues to describe compounds found within microalgae such as proteins pigments and antioxidants It explains the process incorporation of microalgae into meat dairy beverage and wheat products as well as real world food applications in finfish aquaculture mollusk poultry and pet feeding The book concludes by discussing challenges and issues in the field encompassing bioavailability bio accessibility and how to address safety regulatory market economics and sustainability concerns This book is a valuable resource for aquaculturists food scientists and advanced undergraduate and graduate students interested in microalgae as a sustainable food and feed ingredient Examines current data behind the food and feed production using microalgae based processes Analyzes and details the use of microalgae across industries and disciplines Addresses and offers solutions to safety market sustainability and economic issues

Shrimp Culture Technology Prabjeet Singh, Avtar Singh, Anuj Tyagi, Sootawat Benjakul, 2025-02-03 This book focuses on the global scenario of shrimp farming shrimp culture practices shrimp biology taxonomy and major disease challenges along with disease diagnostics in shrimp farming It covers all the recent advancements in shrimp culture technology and serves as a comprehensive guide for all the stakeholders associated with the shrimp industry including academicians students research laboratories shrimp culturists and institutional libraries This book discusses major disease

challenges disease diagnostics value addition quality control industry scenario marketing and processing The book chapters are elucidated with pictorial representations and self explanatory flow charts Individual chapters devoted to shrimp pathology major disease challenges pathogen isolation techniques and diagnostic methods are important parts of the book This book is of interest to aquaculture practitioners academicians students and researchers directly or indirectly involved in shrimp culture

Crustacean Farming John F. Wickins, Daniel O'C. Lee, 2008-04-15 Crustacean Farming Ranching and Culture Second edition John F Wickins and Daniel O C Lee The second edition of an extremely well received book Crustacean Farming deals with all cultivated crustaceans of commercial significance shrimp prawns crayfish lobsters crabs and spiny lobsters and examines the criteria by which both the feasibility and desirability of farming proposals are assessed The characteristics and production methods of farmed and candidate crustacean species are described in sufficient detail to enable areas of profitable involvement to be distinguished from other opportunities presenting only very high risks and possibilities for serious loss Coverage extends right from broodstock acquisition and management through to the operation of hatcheries nurseries and on growing units to key aspects of processing and marketing New to this second edition are ranching and re stocking operations together with the culture of ornamental shrimp and small crustaceans used as live food in fish and shellfish hatcheries The sections on crustacean diseases genetics and nutrition have been extended in the light of recent research advances Examples of investment and operating costs of the different culture options are compared and an analysis of current trends in world crustacean markets is presented to assist in economic and financial appraisal Special consideration is given to the place of crustacean farming within the economics of developing nations in relation to social and environmental impact in order to promote awareness of the wider implications of global developments The consequences of recent research and technical developments are considered together with concerns over genetic and animal welfare issues Specific areas where further advances in technology are needed to improve the reliability or productivity of farming systems are highlighted This important book is a vital tool and reference work for all those involved with crustacean farming worldwide

Shrimp acute hepatopancreatic necrosis disease strategy manual Food and Agriculture Organization of the United Nations ,2020-11-24 The contents of this Shrimp acute hepatopancreatic necrosis disease strategy manual provides information and guidance relevant to the development of policies to respond to outbreaks of acute hepatopancreatic necrosis disease AHPND in farmed marine shrimp The etiologic agents for AHPND are virulent strains of bacteria belonging to the genus *Vibrio* parahaemolyticus and related species which harbor specific toxin genes While these bacterial species are part of the normal microflora of the marine environment they may cause substantial mortalities in whiteleg shrimp *Penaeus vannamei* and giant tiger prawn *Penaeus monodon* cultured in countries in Asia and the Americas These strains of these *Vibrio* bacteria secrete a PirABvp binary toxin resulting in sloughing of tubule epithelial cells and dysfunctions of the hepatopancreas in the acute form mortality can reach 100 percent in affected ponds Chronic presentation of this disease

involves secondary bacterial infection of hepatopancreas and running mortality over the culture cycle Acute or chronic presentation would greatly depend on the culture conditions This disease can be considered a toxicosis rather than an infection Economic losses due to this disease have amounted to over USD 7 billion annually Further outbreaks of AHPND particularly in areas that are currently free of the disease would be expected to experience similar devastating effects on local shrimp producers and the surrounding communities and thus there is an urgent need to develop a contingency plan to control and eradicate this disease This manual includes information on 1 the nature of AHPND a brief review of current knowledge in disease etiology susceptible species and global distribution 2 diagnosis of disease a description of gross clinical signs and laboratory methods 3 prevention and treatment farm management the use and development of antibiotics bacteriophages probiotics disease tolerant shrimp shrimp immunity and vaccination 4 epidemiology AHPND s geographic distribution genotype persistence in the environment reservoir hosts modes of transmission risk factors and economic impacts 5 principles of control and eradication methods for containment mitigation and eradication of AHPND and trade and industry considerations and 6 policy development and implementation AHPND specific objectives options and strategies for eradication and control education capacity building funding and compensation

Manual for an Intensive Culture Shrimp Hatchery (with Emphasis on Penaeus Monodon and Penaeus Vannamei)**

Granvil Dean Treece, Joe M. Fox, 1993 Aquatic Animal Health Management Rajendran Kooloth Valappil, Iddya Karunasagar, Indrani Karunasagar, 2025-08-31 This book covers detailed accounts of viral bacterial and fungal diseases affecting shrimp finfish and molluscan aquaculture It also discusses different aquatic animal health management measures such as disease diagnostics biosecurity bioremediation and application of probiotics antibiotics and vaccines Further the book provides information on the roles of genetics and genomics disease surveillance aquatic animal health policies and the effects of climate change in aquaculture The book is structured into five sections i Pathogens and Diseases of Finfish ii Pathogens and Diseases of Shellfish iii Aquatic Animal Health and Environment iv Health Management in Aquaculture and v Aquatic Animal Health Policy and Regulations Aquaculture plays a pivotal role in food and nutritional security export earnings and the livelihood of millions of people globally However aquatic animal diseases have been a major limiting factor in sustainable aquaculture production in terms of economic losses caused by mass mortality and morbidity In order to combat these endemic and emerging diseases researchers are formulating strategies to mitigate the negative impact of diseases by understanding the pathogens hosts and their environment This book is a useful reference book for students researchers aquaculture technicians farm and hatchery managers and policy makers of aquaculture regulatory agencies

Manual of Diagnostic Tests for Aquatic Animals International Office of Epizootics, 2006 Introductions and Movement of Two Penaeid Shrimp Species in Asia and the Pacific Mathew Briggs, Food and Agriculture Organization of the United Nations, 2005-01-01 Both *Penaeus vannamei* and *P. stylirostris* are introduced species in Asia and the Pacific They

have now become important commercial shrimp species in many countries in Asia. The main reason behind the importation of *P. vannamei* to Asia has been the perceived poor performance, slow growth rate and disease susceptibility of the major indigenous cultured shrimp species *P. chinensis* in China and *P. monodon* virtually everywhere else. However, for many reasons, particularly with the evidence of the introduction of exotic viruses to the region, there has been caution on the part of many Asian governments for the introduction of *P. vannamei* and *P. stylirostris*. Nevertheless, this caution has not been demonstrated by the private sector, which has been bringing stocks of illegal and often disease-carrying *P. vannamei* into Asia from many locations as well as moving infected stocks within Asia. The commercial success of these introductions, despite disease problems, has allowed the development of substantial culture industries for these alien penaeids within Asia, particularly in China and Thailand. One effect of this is that it is rapidly becoming difficult to control the importation and development of this new industry. This report attempts to gather all of the currently available data on the extent of *P. vannamei* and *P. stylirostris* importation and culture in Asia, its potential problems and benefits, and in this way to serve as a source document from which to investigate further means by which control over this issue might be re-established. Recommendations aimed at controlling the importation, testing and culture of these species have been made for all levels and are included in this report.

Reproductive Biology of Crustaceans Elena Mente, 2008-01-04 Crustaceans adapt to a wide variety of habitats and ways of life. They have a complex physiological structure, particularly with regard to the processes of growth, molting, metabolic regulation and reproduction. Crustaceans are ideal as model organisms for the study of endocrine disruption and stress physiology in aquatic invertebrates. This book

Sensitivity of Mangrove Ecosystem to Changing Climate Abhijit Mitra, 2013-08-13

Mangroves are basically salt-tolerant forest ecosystems found mainly in tropical and sub-tropical inter-tidal regions. Till about 1960s, mangroves were largely viewed as economically unproductive areas and were therefore destroyed for reclaiming land for various economic and commercial activities. Gradually, with the passage of time, the economic and ecological benefits of mangroves have become visible, and their importance is now well appreciated. Today, mangroves are observed in about 30 countries in tropical and subtropical regions, covering an area of about 99,300 Sq Km. However, during the past 50 years, over 50% of the mangrove cover has been lost, mainly because of the increased pressure of human activities like shrimp farming and agriculture, forestry, salt extraction, urban development, tourist development and infrastructure. Also, dam on rivers, contamination of sea waters caused by heavy metals, oil spills, pesticides and other products etc. have been found to be responsible for the decline of mangroves. Although the temperature effect on growth and species diversity is not known, sea level rise may pose a serious threat to these ecosystems. The present book addresses all these important issues in separate chapters, with some interesting case studies whose data may serve as a pathfinder for future researches in the sphere of the

influence of climate change on mangrove ecosystem The role of mangroves in the sector of bioremediation is a unique feather in the crown of this coastal and brackishwater vegetation that may be taken up by the coastal industries in order to maintain the health of ambient environment This book seeks to discover and to assess the vulnerability of climate change on mangrove flora and fauna their role in carbon sequestration and some interesting case studies by some groups of dedicated researchers that may serve as the basis of future climate related policies

Sustainable Aquaculture Techniques Martha

Hernandez-Vergara, Carlos Perez-Rostro, 2014-02-19 This book presents some innovative developments in sustainable aquaculture practices in the context of environmental protection and seafood production techniques The chapters are written by experts in their respective areas so that their contribution represents the progress of their research which is intended to mark the current frontier in aquaculture practices Every chapter presents techniques that contribute to good aquaculture practices where direct and vital nutrition and food as a source of energy and biomass generation is fundamentally based We hope this book supports producers and researchers in their activities and helps to maintain a spirit of environmental protection in the context of production of high quality nutritional food
