Files, 1997 **1995 NPTS User's Guide for the Public Use Data Files**, 1997 *Recent Technologies in Capture of CO₂*

Rosa-Hilda Chavez, Javier de J. Guadarrama, 2014-09-30 *Recent Technologies in the capture of CO₂* provides a comprehensive summary on the latest technologies available to minimize the emission of CO₂ from large point sources like fossil fuel power plants or industrial facilities. This ebook also covers various techniques that could be developed to reduce the amount of CO₂ released into the atmosphere. The contents of this book include chapters on oxy fuel combustion in fluidized beds, gas separation membrane used in post combustion capture, minimizing energy consumption in CO₂ capture processes through process integration, characterization and application of structured packing for CO₂ capture, calcium looping technology for CO₂ capture and many more. *Recent Technologies in capture of CO₂* is a valuable resource for graduate students, process engineers and administrative staff looking for real case analysis of pilot plants. This eBook brings together the research results and professional experiences of the most renowned work groups in the CO₂ capture field. *Product and Process Modelling* Ian T. Cameron, Rafiqul Gani, 2011-09-12 This book covers the area of product and process modelling via a case study approach. It addresses a wide range of modelling applications with emphasis on modelling methodology and the subsequent in depth analysis of mathematical models to gain insight via structural aspects of the models. These approaches are put into the context of life cycle modelling where multiscale and multiform modelling is increasingly prevalent in the 21st century. The book commences with a discussion of modern product and process modelling theory and practice followed by a series of case studies drawn from a variety of process industries. The book builds on the extensive modelling experience of the authors who have developed models for both research and industrial purposes. It complements existing books by the authors in the modelling area. Those areas include the traditional petroleum and petrochemical industries to biotechnology applications, food, polymer and human health application areas. The book highlights the important nature of modern product and process modelling in the decision making processes across the life cycle. As such it provides an important resource for students, researchers and industrial practitioners. Ian Cameron is Professor in Chemical Engineering at the University of Queensland with teaching, research and consulting activities in process systems engineering. He has a particular interest in process modelling, dynamic simulation and the application of functional systems perspectives to risk management, having extensive industrial experience in these areas. He continues to work closely with industry and government on systems approaches to process and risk management issues. He received his BE from the University of New South Wales, Australia and his PhD from Imperial College London. He is a Fellow of IChemE. Rafiqul Gani is a Professor of Systems Design at the Department of Chemical and Biochemical Engineering, Technical University of Denmark and the director of the Computer Aided Product Process Engineering Center (CAPEC). His research interests include the development of computer aided methods and tools for modelling, property estimation and process product synthesis and design. He received his BSc from Bangladesh University of Engineering and Technology in 1975 and his MSc in 1976 and PhD in 1980 from Imperial College.

London He is the editor in chief of Computers and Chemical Engineering journal and Fellow of IChemE as well as AIChE Product and process modelling a wide range of case studies are covered Structural analysis of model systems insights into structure and solvability Analysis of future developments potential directions and significant research and development problems to be addressed **User's Guide for the Public Use Tapes** ,1991 **Feature Papers** Michael

Gani,2002-10-30 The idea of editing a book on modern software architectures and tools for CAPE Computer Aided Process Engineering came about when the editors of this volume realized that existing titles relating to CAPE did not include references to the design and development of CAPE software Scientific software is needed to solve CAPE related problems by industry academia for research and development for education and training and much more There are increasing demands for CAPE software to be versatile flexible efficient and reliable This means that the role of software architecture is also gaining increasing importance Software architecture needs to reconcile the objectives of the software the framework defined by the CAPE methods the computational algorithms and the user needs and tools other software that help to develop the CAPE software The object of this book is to bring to the reader the software side of the story with respect to computer aided process engineering **Scale-Up Processes** Jamal Chaouki,Rahmat Sotudeh-Gharebagh,2021-09-20 Common scale up

methods are conventional where the blind piloting is essential This imposes huge investment and leads to failures mostly in solid processing However the limitations of resources current shortcomings short time to market demand are forced companies to minimize piloting With these situations in mind current digitalization outlook and computational facilities we proposed and developed a novel iterative scale up method with case studies which highly expedites the process innovation through the following key sequences *Perry's Chemical Engineers' Handbook, Eighth Edition* Don W.
