

Speedometer

The speedometer shows indicated vehicle speed in miles per hour and kilometers per hour.

Odometer

The odometer shows the total distance traveled in miles.

Temperature Indicator

Proper oil level, particularly before starting the vehicle, is important to proper operation of the engine. The temperature indicator is designed to warn of engine overheating. If the indicator shows the engine is overheating, stop the vehicle immediately and check the oil level. If the oil level is low, add oil to the correct level. If the oil level is correct, the engine may be overheating due to a faulty thermostat or a blocked radiator.

When a new indicator is installed and turned on, it will show the same reading as the previous indicator. The new indicator will show the same reading as the previous indicator. The replacement indicator must be set to the same reading as the previous indicator. To determine the actual vehicle mileage, add the mileage shown on the label to the current odometer reading. If the replacement indicator can be set up to the same mileage as the previous indicator, no label is needed.

Trip Odometer

The optional trip odometer may be used to show the distance traveled in miles. This instrument may be used to more accurately record trip mileage in kilometers.

Fuel Gauge

The fuel gauge will register the APPROXIMATE fuel level in the tank, when the ignition is in the RUN position.

When the gauge registers EMPTY, some fuel is still available as a reserve. When the gauge registers FULL, some fuel can still be added to the tank.

The following conditions may be considered normal:

- Fuel station pumps may shut off before fuel gauge indicates FULL.
- Amount of fuel required for fill-up may not exactly correspond to gauge reading.
- Needle may not move away from FULL until some time after fill-up.
- Needle may move during turns, stops and accelerations.
- When the ignition switch is turned to the OFF position, the needle will not necessarily return all the way to the EMPTY mark.

Oil/Choke Indicator Light

This light will come on to provide a "bulb check" when the ignition is turned on, but should go out after the engine is started. If light fails to come on with the ignition turned on, it could indicate a burned-out bulb, or a blown instrument lamp fuse or a defective electric choke heater circuit. Have the system repaired if light does not come on during check.
